The graduated driver's license system is unfair to students and it should not be a law. The disadvantages outnumber the advantages by far. This system punishes responsible student drivers, forbids carpooling under age 17, and restricts students, which is not the law's responsibility. It is not an effective way to limit teenage accidents.

First of all, several teenagers are responsible drivers. It is unfair to punish ~~them~~ students by making them wait until they are 17 to obtain an unrestricted license, ~~because of the accidents unresponsible drivers cause~~. Unsafe student drivers should be ~~dealt~~ handled directly, instead of punishing all students. This new law will not ~~limit~~ reduce the number of teenage accidents. Irresponsible teenage drivers will not change because of the law, so there will still be accidents.

Also, carpooling is a very effective way to help the environment, and the new law forbids students under 17 to have more than one other person in the car. Many teenagers take their friends and siblings to school who have no other way of getting to school. Since the new law passed,

students can no longer drive siblings and friends to school. This in turn puts a strain on parents to provide rides to school Carpooling is much easier on parents and students, as well as the environment.

Finally, this new law restricts teenagers and singles them out. It is the parent's responsibility to set limits when their children drive, not the law's responsibili Parents tell children how late they are allowe to drive, it is not right for the law to limit children. This law singles teenag out making them feel inadequate.

For all these reasons, this law should not have been applied. Respons students should not be restricted. Carpooling shoud not be outlawed, Parents should set rules for children about when they can drive. The restrictions are not an effective way to reduce accidents or change teenagers into responsible drivers.
