Rates for live births and total deaths are per 1,000 population. The general fertility rate is births per 1,000 females aged 15-44 years. The adolescent birth rate is births per 1,000 females aged 10-17 years. The infant death rates and other termination ratios are the number of events per 1,000 live births. Adolescent pregnancy rates are the sum of live births, reportable fetal deaths and induced termination of pregnancies to adolescents aged 10-17 years per 1,000 female population in that age group. Race is based on the mother's race for births and other termination data. Please note the appearance of an asterisk (*) indicates rates and percents based on births are not calculated when the number of births is less than 10, or rates based on population are not calculated when the population in the denominator is less than 100.

Other Terminations - Total number of fetal deaths and induced termination of pregnancies.

A dash (-) indicates there were no events. Please note the appearance of an asterisk (*) indicates counts for state, region, and county totals by race are not presented if the population in each race group is less than 50.

Rates for live births and total deaths are per 1,000 population. The general fertility rate is births per 1,000 females aged 15-44 years. The adolescent birth rate is births per 1,000 females aged 10-17 years. The infant death rates and other termination ratios are the number of events per 1,000 live births. Adolescent pregnancy rates are the sum of live births, reportable fetal deaths and induced termination of pregnancies to adolescents aged 10-17 years per 1,000 female population in that age group. Race is based on the mother's race for births and other termination data. Please note the appearance of an asterisk (*) indicates rates and percents based on births are not calculated when the number of births is less than 10, or rates based on population are not calculated when the population in the denominator is less than 100. Rates for live births and total deaths are per 1,000 population. The general fertility rate is births per 1,000 females aged 15-44 years. The adolescent birth rate is births per 1,000 females aged 10-17 years. The infant death rates and other termination ratios are the number of events per 1,000 live births. Adolescent pregnancy rates are the sum of live births, reportable fetal deaths and induced termination of pregnancies to adolescents aged 10-17 years per 1,000 female population in that age group. Race is based on the mother's race for births and other termination data. Please note the appearance of an asterisk (*) indicates rates and percents based on births are not calculated when the number of births is less than 10, or rates based on population are not calculated when the population in the denominator is less than 100. Source: Tennessee Department of Health, Division of Policy, Planning and Assessment

The population estimates for 2012 were interpolated from the Census five-year age cohort estimates (CC-EST2011-ALLDATA-[ST-FIPS] May 2012) by the Division of Policy, Planning and Assessment in October 2012. These figures may result in rates that differ from those published in previous time periods.

Tennessee Vital Statistics Summary Data 2012 was published by the Tennessee Department of Health
