

Sentinel Provider Influenza-Like Illness (ILI)¹ Surveillance Summary for the Week of January 20-26, 2019 (Week 4)

<https://www.tn.gov/health/cedep/immunization-program/ip/flu-in-tennessee.html>

Summary for	# Sites reporting	Total Sites	Total Regional ILI	Total Regional Patients	% ILI	Compared to State ²
Hamilton County (Chattanooga)	4	4	3	585	0.5%	lower
East Tennessee Region	4	9	89	1785	5.0%	higher
Jackson-Madison County	1	1	29	631	4.6%	
Knoxville-Knox County	1	3	5	75	6.7%	
Mid-Cumberland Region	7	11	14	562	2.5%	
Shelby County (Memphis)	4	7	65	791	8.2%	higher
Nashville-Davidson County	7	11	21	1240	1.7%	lower
Northeast Region	2	4	0	107	0.0%	
South Central Region	3	3	0	147	0.0%	lower
Southeast Region	4	4	12	384	3.1%	
Sullivan County (Tri-Cities)	1	2	0	284	0.0%	lower
Upper Cumberland Region	4	4	3	383	0.8%	lower
West Tennessee Region	6	6	4	193	2.1%	
State of Tennessee	48	69	245	7167	3.42%	

Influenza activity in Tennessee

- The percentage of outpatients with ILI visiting the state's Sentinel clinic sites was 3.42%. The CDC's baseline rate is 2.2%.
- 5.6% of specimens tested positive for influenza viruses.
- 43 of 95 Tennessee counties have had at least one confirmed influenza-positive result in recent weeks.

The percentage of patients with ILI reported in Week 4 was 3.42% as compared to 1.96% in Week 3. To date, 285 specimens for Week 4 have been tested by TDH Laboratory Services and two commercial laboratories that serve clinics across Tennessee; 17 were positive for influenza virus. **Due to a change in reporting, results for specimens tested at TDH Laboratory Services are not represented in the Respiratory Viral Panel table below for weeks 51-4.**

SPN sites should submit specimens year-round from ALL patients meeting the ILI case definition: Fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Case definition is not dependent on any test. If you have questions, contact your regional or state SPN representative. The TDH specimen submission form dated September 2015 should be used.

Specimens are critical to be able to track the geographic spread and intensity of seasonal influenza viruses, to detect the emergence of novel virus and/or antiviral resistance and provide data for vaccine strain selections.

Respiratory Viral Panel

Number of Positive Specimens, by week

Month/Week	#	Flu A (H1N1)	Flu A (H3)	Unsub. Flu A	RSV A	RSV B	Paraflu 2	Paraflu 3	Rhino	Meta-pneumo	Adeno
January											
Current	285	1	1	15	0	2	1	0	1	0	0
3	350	8	3	16	0	7	0	0	3	3	1
2	310	4	2	11	0	1	0	0	3	2	0
1	263	2	5	9	0	7	0	0	5	2	0
December											
52	239	4	5	11	0	2	0	1	4	0	0
51	310	6	0	25	1	6	2	0	5	1	1

Percentage of Outpatient Visits Reported by the U.S. and Tennessee Outpatient Influenza-like Illness Surveillance Network (ILINet) as Influenza-like Illness, 2018-2019

Updated: February 1, 2019

Influenza Positive Tests Submitted to TN Dept. of Health Laboratory Services Tennessee, 2018-2019

Updated: February 1, 2019

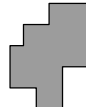

Influenza Confirmed by Culture or PCR in Tennessee from Specimens Collected by Any Source within the Past 6 Weeks

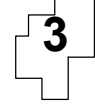

December 16, 2018 through January 26, 2019

- Strains are reported by county of case residence.
- Counties where influenza sentinel providers are located are identified with bold boundary lines.
- Stars mark counties with large metropolitan populations (Memphis, Jackson, Nashville, Chattanooga, Knoxville, and the Tri-Cities area).

 2009 A(H1N1)

 **a** Unsubtyped A

 **3** A(H3)

 **b** Seasonal B

Note: TDH weekly laboratory surveillance for influenza includes PCR and culture results for Tennessee specimens submitted to two commercial laboratories serving outpatient clinics and hospitals statewide. These numbers are added to those from TDH Laboratory Services and help provide a picture of influenza activity areas of the state in which there are not Sentinel surveillance sites.

Reference Information for Sentinel Provider Network

1 Influenza-like illness (ILI) is defined as fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Classification of ILI is based upon symptoms only and does not require any test.

2 The % of patients with ILI seen in each region is compared to the statewide average. Regions with % statistically-significantly different from the state average are noted as "higher" or "lower." The CDC reports that the percentage of patients visiting outpatient healthcare providers in the Sentinel Provider Network (SPN) with influenza-like-illness (ILI) when influenza viruses are not circulating is expected to fall at or below a specific SPN baseline [nationwide = 2.2%, East South Central region (AL, TN, MS, KY) = 2.3%]. When the percentage of patients with ILI exceeds this baseline, this suggests that influenza viruses may be circulating.

Important information for Sentinel Providers

Sentinel Providers report ILI by the end of Wednesday following the end of the reporting week (<https://wwwn.cdc.gov/ilinet/>) and collect and ship specimens from ILI cases Monday through Thursday (maximum 10/week per provider). All Sentinel Provider specimens MUST be accompanied by the Influenza and Respiratory Viral Panel Submission form or testing will not be done. The Respiratory Viral Panel is only validated for nasopharyngeal (NP) specimens. Specimens collected from other sites cannot be tested.

Additional laboratory supplies can be obtained by completing the lab order supply form. To ensure the order is filled, please include the CDC Provider ID Code.
