| Knoxville-Knox County       | 2           | 4         |    | 0          | 368      | 0.0%  |            |
| Mid-Cumberland Region       | 9           | 12        |    | 8          | 712      | 1.1%  |            |
| Memphis-Shelby County       | 2           | 9         |    | 0          | 123      | 0.0%  |            |
| Nashville-Davidson County   | 3           | 6         |    | 15         | 677      | 2.2%  | higher     |
| Northeast Region            | 1           | 3         |    | 0          | 202      | 0.0%  |            |
| South Central Region        | 3           | 3         |    | 0          | 240      | 0.0%  |            |
| Southeast Region            | 2           | 5         |    | 0          | 131      | 0.0%  |            |
| Sullivan County             | 1           | 2         |    | 0          | 249      | 0.0%  |            |
| Upper Cumberland Region     | 4           | 5         |    | 1          | 630      | 0.2%  |            |
| West Tennessee Region       | 6           | 6         |    | 1          | 599      | 0.2%  |            |
| State of Tennessee          | 43          | 68        |    | 54         | 7228     | 0.75% |            |

The percentage of patients with ILI reported by the TN SPN decreased to 0.75% for Week 01 as compared to 1.79% reported in Week 52. Of 43 specimens tested, 10 (23.3%) were positive by PCR for influenza virus; all were subtyped as H1N1. ILI is defined as fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Classification of ILI is based upon symptoms only and does not require any test. The SPN Protocol (eff. Sept 1, 2009): SPs report ILI by the end of Tuesday following the end of the reporting week; collect and ship specimens from ILI cases on Mondays and/or Wednesdays (maximum 10/wk) using the SPN Specimen Collection Form dated 8/21/09. Complete the lab supply order form to receive new specimen collection supplies.

The CDC reports that the percentage of patients visiting outpatient healthcare providers in the Sentinel Provider Network (SPN) with influenza-like-illness (ILI) when influenza viruses are not circulating is expected to fall at or below a specific SPN baseline [nationwide = 2.2%, East South Central region (AL, TN, MS, KY) = 2.4%]. When the percentage of patients with ILI exceeds this baseline, this suggests that influenza viruses may be circulating.

<sup>\*</sup>The percentage of influenza-like-illness patients seen in each region is compared to the statewide average. Regions with percentages statistically-significantly different from the state average are noted as "higher" or "lower."

# Percentage of Outpatient Visits Reported by the U.S. and Tennessee Outpatient Influenza-like Illness Surveillance Network (ILINet) as Influenza-like Illness, 2009-2010

Influenza Positive Tests Submitted to TN Dept. of Health Laboratory Services,

|            | 52             | 36         | 4           | 0         | 0      | 0 |
| Jan.       | 1              | 43         | 10          | 0         | 0      | 0 |
|            | 2              |            |             |           |        |   |
|            | 3              |            |             |           |        |   |

Laboratory testing is done specifically for Seasonal A (H1) A(H3) & B virus subtypes, in addition to Pandemic A (H1). Non-subtyped and non-subtypable results are no longer reported in this chart or on the state map.

All Sentinel Provider specimens MUST now be accompanied by the SPN Influenza Submission form dated 8/21/2009, or testing will not be done.

This table shows all specimens tested by the State Lab. The state lab policy for influenza testing is at <a href="http://health.state.tn.us/H1N1.htm#hcp">http://health.state.tn.us/H1N1.htm#hcp</a>.

  SPN Questions:
- Regional SPN Coordinator (see map)
- Robb Garman or Robert Taylor 800-404-3006 or 615-741-7247

## Influenza confirmed by culture or PCR in Tennessee from specimens collected by any source within the past 6 weeks.

November 29, 2009 to January 9, 2010

- Strains are reported by county of case residence or, if unknown, county where the specimen was collected.
- Counties where influenza sentinel providers are located are identified with bold boundary lines.
- Stars marks counties with large metropolitan populations (Memphis, Jackson, Nashville, Chattanooga, Knoxville, and the Tri-Cities area)
- Novel 2009 H1N1 results are for confirmed cases identified by PCR testing; counties with their first Novel 2009 H1N1 positive result in the past 6 weeks are indicated by diagonal striping.
