Course Description

The TDOT Hazardous Materials Certified Technician is an individual who has demonstrated a basic understanding of radiation safety and compliance; gauge operation; testing procedures; and maintenance.

Scope of Course

The program covers the following topics:

Radiation safety fundamentals and principles

Regulatory requirements

Portable gauge theory, design and operation

Gauge maintenance and troubleshooting

Operating, emergency, maintenance and transportation procedures

Leak testing

Storing, packaging and transporting gauges

Prerequisites

For TDOT employees only; selection by Headquarters, Materials and Tests.

Certification Requirements

HMCP.2

TDOT will grant certification to those applicants who attend the training seminar.

Recertification is necessary every three (3) years and requires that the technician attend the classes and successfully complete the written and performance examinations.

Study Materials

Text: Distributed in class.
