## Annual Population Estimates for the U.S. and States, Census 2000 Thru Estimated 2006

The U.S. Census Bureau annually produces estimates of total resident population for each state and county. County population estimates are produced with a component of population change method, while the state population estimates are the sum of all county populations within the state. Those estimates, for years 2001 to 2006 are shown on Page 2. The base population comes from the Census 2000. It should be noted that there were adiustments made due to the effects of hurricanes Katrina and Rita.

The Census Bureau uses estimated components of population change to estimate changes in the population during a time period. These components consist of births, deaths, net internal migration, and net international migration. The details from this survey are available at the Census Bureau Web site at http://www.census.gov/popest/estimates.php.

#### **State Information**

Texas gained more people than any other state between July 1, 2005, and July 1, 2006 (579,275). Florida and California followed, gaining 321,697 and 303,402, respectively. Rounding out the

top five states were Georgia (231,388) and Arizona (213,311). Tennessee had the 10th largest growth in total population with an increase of 83,058.

Arizona was the nation's fastest-growing state over the year with its population rising 3.6 percent. Nevada ranked second as its population climbed by 3.5 percent, followed by Idaho (2.6 percent), Georgia (2.5 percent), and Texas (2.5 percent). Tennessee had a growth rate last year of 1.4 percent.

The South and West again monopolized the list of fast-est-growing states with Utah, North Carolina, Colorado, Florida and South Carolina rounding out the top 10. Colorado and South Carolina replaced Delaware and Oregon on the list this year.

From 2000 to 2006, the largest percentage growth was in Nevada (24.9), followed by Arizona (20.2), Georgia (14.4), and Utah (14.2).

According to the estimates, California remains the most populous state with a population of 36.5 million on July 1, 2006. Rounding out the top five states were Texas (23.5 million), New York (19.3 million), Florida (18.1 million) and Illinois (12.8 million).

Louisiana's population totaled 4.3 million on July 1, 2006, down nearly 220,000 from one year earlier. The state lost almost 5 percent of its pre-Hurricane Katrina population during the course of the year. During the previous one-year period (July 1, 2004, to July 1, 2005), Louisiana's population had grown by 12,000 to 4.5 million. North Dakota was the only other state with a declining population over the prior six years.

#### **Highlights**

Some interesting information from the data is that the Northeast region grew by only 62,000 persons (0.1 percent) while the South increased by 1.5 million (1.4 percent) and the West increased by 1 million (1.5 percent). The Midwest region increased by 281,000 people (0.4 percent).

The South accounts for 36 percent of the total population, and the West comprises 23 percent. The Midwest and the East comprises 22 and 18 percent, respectively. North Carolina has moved to the 10th most populous state, passing New Jersey.
