

**REELFOOT LAKE STATE NATURAL AREA**  
**CLASS I SCENIC-RECREATIONAL STATE NATURAL AREA**

**COUNTY:** Lake, Obion

**ACREAGE:** 18,000

**7.5' QUADRANGLE:** Tiptonville, Hornbeak  
Samburg, Ridgely

**OWNERSHIP:** State of Tennessee

**PHYSIOGRAPHIC PROVINCE:** Mississippi  
Alluvial Floodplain

**YEAR DESIGNATED:** 1973

**DESCRIPTION:** Reelfoot Lake is an 18,000- acre natural area located in Lake and Obion Counties in northwest Tennessee. The lake was created by a series of violent New Madrid fault zone earthquakes in the winter of 1811-1812. The lake and surrounding forests attract a large diversity of wintering and breeding populations of waterfowl, and boasts a significant population of wintering bald eagles. Reelfoot is also recognized by the United States Department of Interior as a National Natural Landmark. It is one of only fourteen National Natural Landmarks in Tennessee. These landmarks are recognized as the country's best remaining examples of major biotic communities and geologic features.

The natural area includes about 10,900 acres of open water and marshes, and about 7,100 acres of bottomland hardwood forests and cypress dominated bottoms and sloughs. Much of the open lake habitat and forested habitats inter-grade creating transitional zones teeming with fish, reptiles, amphibians, other wildlife, and emergent vegetation. Reelfoot offers opportunities for outdoor recreational activities such as wildlife viewing, bird watching, fishing, hunting, and hiking. It is a popular winter destination for people interested in observing bald eagles.

The contiguous area within Reelfoot Lake State Natural Area and Reelfoot National Wildlife Refuge is home to over 34 species of rare or endangered plants or animals. There are at least 14 rare bird species benefiting from this large aquatic/terrestrial landscape. These include the bald eagle, Swainson's warbler, peregrine falcon, and Mississippi kite. There are also 12 rare plant species including copper iris (*Iris fulva*), featherfoil (*Hottonia inflata*), and yellow water-crowsfoot (*Ranunculus longirostris*) found in the seasonally flooded sloughs and bottoms surrounding the lake. There are eight rare species of animals including mammals, amphibians, and invertebrates protected at Reelfoot Lake. The diversity of habitat and the large scale and continuity of the landscape offer a significant refugium for all types of wildlife that are migrating through or inhabiting this Mississippi River floodplain.
