Re: The State of Tennessee Underground Storage Tank Fund – Actuarial Report

Dear Mr. Boyd:

Enclosed is our report on the actuarial study of the Tennessee Underground Storage Tank Fund as of March 1, 2022. The report has been prepared for the State of Tennessee.

This report is provided by Laura A. Maxwell, FCAS, MAAA, CSPA who meets the basic education standards of the Casualty Actuarial Society and the American Academy of Actuaries and continuing education standards of the American Academy of Actuaries to make this statement of actuarial opinion.

We have enjoyed working with you on this assignment and look forward to discussing any questions you may have with this report.

Best Regards,

A handwritten signature in blue ink that reads "Laura A. Maxwell".

Laura A. Maxwell, FCAS, MAAA, CSPA  
Director & Consulting Actuary

# Tennessee Underground Storage Tank Fund

Actuarial Study as of March 1, 2022

## PURPOSE & SCOPE

Pinnacle Actuarial Resources, Inc. (Pinnacle) was retained by the Tennessee Department of Finance and Administration to conduct an actuarial study of the Underground Storage Tank Fund (TN UST or the Fund) as of March 1, 2022. The purpose of this analysis is to estimate future payments arising from the cleanup and third party liability of underground petroleum storage tank leaks and spills assumed by the State of Tennessee, Division of Underground Storage Tanks (“the State” or “the Division”). Specifically we were retained to:

- Estimate expected payments arising from leaks and spills from inception of the program in 1990 through the period ending June 30, 2032.
- Estimate the required reserves as of March 1, 2022, June 30, 2022, and June 30, 2023 to pay for remediation costs for releases reported through fiscal years 2022 and 2023, as appropriate.
- Estimate the liability to include a provision for the additional requests for reimbursement from known and currently reported leaking sites as well as for future requests for reimbursements from problem sites not yet reported.
- Estimate ultimate costs of releases reported during each of the years 2023 through 2032.
- Provide a cash-flow analysis incorporating total revenue and operational expenses to give a clearer prediction of any unobligated balance on a nominal basis.
- Provide an estimate of the reduction in revenue due to movement to more fuel-efficient and electric vehicles.
- Provide an estimate of required reserves for claims without a responsible party that have been approved under the Commissioner’s authority. These claims are referred to as auxiliary claims throughout this report and the exhibits.

For the purposes of this report, the accounting date (the date used to separate the paid versus unpaid claim estimates) and the valuation date (the date through which transactions are included in the data used to estimate the unpaid claim estimates), are both March 1, 2022. Future projected periods carry a valuation date commensurate with the end of each projection period. The review date (the cutoff date for including information to the actuary) is June 6, 2022.

## DISTRIBUTION & USE

This study has been conducted at the request of Tennessee Finance and Administration officials. The exhibits attached in support of our findings are an integral part of this report. These sections have been prepared so that our actuarial assumptions and judgments are documented. Judgments about the conclusions drawn in this report should be made only after considering the report in its entirety. We remain available to answer any questions that may arise regarding this report. We assume that the user of this report will seek such explanation on any matter in question.

Our conclusions are predicated on a number of assumptions as to future conditions and events. Those assumptions, which are documented in subsequent sections of this report, must be understood in order to place our conclusions in their appropriate context. In addition, our estimates and projections are subject to inherent limitations, which are also discussed in this report.

## RELIANCES & LIMITATIONS

We have prepared this report in conformity with its intended use by persons technically competent in the areas addressed and for the stated purposes only. Judgments as to conclusions, methods, and data contained in this report should be made only after studying the report in its entirety. Furthermore, we are available to explain any matter presented herein.

Throughout our analysis we have, without audit or verification, relied on historical data and qualitative information provided by TN UST. We reviewed this data for consistency among data elements and with the data provided for our 2020 analysis. Ricky Cathey of the Division informed us that certain facilities in the data are not the responsibility of the Tennessee Underground Storage Tank Fund and thus need to be excluded from the analysis. We removed any facility ID beginning with a zero. Two examples are Tennessee Department of Transportation and National Guard facilities. Also, any federally funded sites were removed from the data. We believe the data to be reasonable and accurate. The accuracy of our results is dependent upon the accuracy and completeness of this underlying data. Therefore, any material discrepancies discovered in this data by TN UST or its auditor should be reported to us and this report amended accordingly, if warranted.

There is a limitation upon the accuracy of these estimates and projections in that there is an inherent uncertainty in any estimate of unpaid claims and financial projections. This uncertainty is due to the fact that the ultimate liability for claims is subject to the outcome of events yet to occur, e.g., the likelihood of claimants bringing suit, the size of awards, changes in the standards of liability, and the attitudes of claimants toward settlement of their claims. Also our financial projections are subject to a

high degree of uncertainty because they require prediction of future economic, legal, and judicial conditions which are not knowable in advance. In our judgment, we have employed techniques and assumptions that are appropriate, and the conclusions presented herein are reasonable, given the information currently available. However, it should be recognized that future financial results will likely deviate, perhaps materially, from our estimates.

Our estimate is characterized by a high degree of uncertainty in estimating unpaid claims. Specifically, the variability affecting unpaid claims is chiefly driven by future legislation in Tennessee and regulatory standards affecting cleanup costs. The probability that actual future loss and loss expense payments may develop to levels well outside our estimates must be considered material.

A substantial source of uncertainty relates to the emergence of the COVID-19 pandemic and its ongoing impact. This uncertainty could impact future estimates in several different ways including distortion of development patterns as claims are handled differently and changes in economic environments that could affect the cost of future claims. Further, projected revenue and investment income may have been affected by the pandemic as well. At this point, it is not possible to reliably forecast these impacts. The COVID-19 pandemic may have a material impact on our future cost estimates as its effects emerge.

## BACKGROUND

The Tennessee General Assembly established the Tennessee Petroleum Underground Storage Tank Fund, which is codified in Tennessee Code Annotated, Section 68-215-110 (“the Storage Tank Fund”). The purpose of the Storage Tank Fund is to provide the necessary funds for the investigation, identification, and for the reasonable and safe cleanup of releases from petroleum underground storage tanks, including monitoring and maintenance of petroleum sites within the State of Tennessee. The Storage Tank Fund may also be used to provide a mechanism to assist with the financial responsibility requirements for owners/operators of petroleum underground storage tanks, including cleanup of contamination and third party claims due to bodily injury and/or property damage caused by leaking petroleum underground storage tanks. The Storage Tank Fund is supported by the fees, civil penalties and damages collected pursuant to Tennessee Code Annotated, Title 68, Chapter 215, Subsections 109, 110, and 121.

TN UST’s fiscal year runs from July 1 to June 30. Therefore, for example, fiscal year ending 2019 refers to the twelve month period from July 1, 2018 through June 30, 2019.

## SUMMARY

The estimated liabilities contained in this report are the product of historical experience, actuarial assumptions, quantitative analysis, and professional judgment. The starting point of the analysis is request for reimbursement data provided by the Division of Underground Storage Tanks evaluated as of March 1, 2022 as summarized in Appendix A. Data for the auxiliary claims are shown in Auxiliary Exhibit 1, Page 1.

The data is organized by claim report year. The expression “claim” used in this report refers to a release report filed with the Division. Claim report year is the year in which the claim was initially filed with the Division’s reimbursement program, not necessarily the same as when the release actually occurred. Oftentimes it is not possible nor practical to determine when a release actually occurred. It is a common practice across the industry to record the timing of releases by year reported as opposed to year the release occurred.

The estimated required reserves as of March 1, 2022 are \$20.6 million. This decreases to \$19.9 million as of June 30, 2022 and increases to \$21.1 million as of June 30, 2023 as shown on Exhibit 1.2. Similar to the prior analysis as of March 1, 2020, the required reserves are a combination of water based on three potential treatment scenarios and non-water claims. Including the auxiliary claims the required reserves are \$21.7 million as of March 1, 2022; \$24.3 million as of June 30, 2022 and \$24.3 million as of June 30, 2023.

Paid and pending claims for claim years 1990-91 through 2019-20 have increased \$8.6 million since March 1, 2020. The paid and pending claims for these years is now \$421.7 million which is less than the ultimate estimate of \$454.6 million as of March 1, 2020. As a result, the expected ultimate costs for these claim years has been reduced by \$8.0 million. See Exhibit 1.1 for more details.

A cash flow analysis is provided in Exhibits A through E and includes the auxiliary claims. The cash flow, shown in Exhibit A, increases through fiscal year 2023-24 then decreases. Similarly the projected equity balance also increases at first but decreases in fiscal year 2025-26 which is shown in Exhibit B. One change in this analysis was to adjust the revenue for the current moratorium on tank fees and the expected future reductions in fuel consumption. Details on the assumptions underlying this analysis are provided below.

## DATA

### Definition of Site

The Division of Underground Storage Tanks reimburses for clean up or third party liability per leaking tank site as opposed to per leaking tank. The tank inventory as of March 1, 2022 indicates 15,825 petroleum tanks are currently in use or temporarily out of use. This report includes tanks for which petroleum assurance fees are paid; it excludes tanks containing heating oil and hazardous substances and tanks owned by the Federal and State governments. Exhibits projecting future releases and cost also exclude State of Tennessee tanks, which do not receive fund reimbursement. Any pending reimbursements to the State of Tennessee for claims have been disallowed since 2006.

### Claims Status Categories

The claim status assigned by the Division of Underground Storage Tanks is accepted as accurate. Claim status categories in the database are as follows:

- 0 suspected release - red records
- 0a suspected release - closed
- 1 tank closure
- 1a completed tank closure
- 1b closure application expired
- 1c line closure
- 1d completed line closure
- 2 site check
- 3 release investigation
- 5 corrective action & release investigation
- 6 corrective actions
- 7 closure monitoring
- 8 case closed
- 9 other
- 13 abandoned facility project

Requests identified as “1 tank closure”, “1a completed tank closure”, “1b closure application expired”, “1c line closure”, “1d completed line closure” or “8 case closed” were considered in the category of “closed” for the purpose of this report. Requests identified as “7 closure monitoring” were considered in the category of “closure.” All other requests were considered in the category of “open.” The “active” category of this report consists of requests that are classified either “open” or “closure.”

## Request Types

There are three types of request categories in the database - drinking water, non-drinking water and “blank,” which are all other types of cleanup requests. These designations refer to the type of cleanup required at a particular site.

Prior analyses revealed that there was not a significant difference in cleanup costs for drinking water sites as compared to cleanup of non-drinking water sites. For the purpose of the 2018 and subsequent analyses, drinking water and non-drinking water cleanup requests were grouped together as “water claims”. Revisions were made to the assignment of claims to water and non-water in this analysis. The historical diagonals in the development triangles were revised for this revision. The revision distorts the comparison to prior for water and non-water separately.

## METHODOLOGY

### General Overview of Exhibits

The cash flow analysis is contained in Exhibits A through F. The cash flow through June 30, 2032 is summarized in Exhibit A and the equity balance is provided in Exhibit B. Revenue is estimated in Exhibit C and expenses are estimated in Exhibit D. Future claim payments are provided in Exhibit E based on estimated ultimate losses and payment patterns in the liability analysis (Exhibits 1 through 16, the Appendices and the Auxiliary Exhibits). Exhibit F, added in this analysis, calculates the indicated revenue from the assurance fee with adjustments for expected reductions in fuel consumption.

Exhibit 1.1 provides a change from the prior analysis for water (base), non-water and combined.

Exhibit 1.2 provides expected payments and estimated reserves as of March 1, 2022, June 30, 2022 and June 30, 2023 for the base scenario and three additional scenarios requested by the Fund.

Exhibit 1.3 provides expected payments by claim year for the base scenario and three additional scenarios for the 2022-23 and subsequent claim years while Exhibit 1.4 provides ultimate payments by claim year for 7/1/2021-3/1/2022 and prior claim years.

Frequency and claim count estimates are provided in Exhibits 2 through 6 while severity and loss amounts are calculated in Exhibits 7 through 10.

Future payments by claim year and fiscal year are determined in Exhibits 11 through 15.

A summary of estimated liabilities is provided in Exhibit 16.

The auxiliary exhibits summarize the claims data and future payments on Exhibit 1. Exhibit 2 provides the payments by claim year and fiscal year.

Claims and payments are summarized in Appendix A. The deductible history is shown in Appendix B and a listing of all claims is provided in Appendix C.

Appendix D (water) and Appendix E (non-water) calculate ultimate payments by claim year for claims as of March 1, 2022. Appendix F (water) and Appendix G (non-water) calculate ultimate paid/closed claim counts for claims as of March 1, 2022.

### Projection of Reported Releases (Claims with Payments)

The projected number of tanks with problems is estimated in Exhibits 2.1 and 2.2 split between water sites and other sites. The sharp decrease in number of new releases reported after July 1, 2005 is a very positive development, and dramatic when compared to what had been expected from earlier history. Some of the reasons cited by the State Division of Underground Storage Tanks for the sharp reduction in new reports were:

- Better monitoring system in place at virtually all sites.
- Dramatic increase in inspection with a regular rotation to all sites in less than 3 years, with sites of concern more often.
- Formal enforcement actions being taken where problems are identified.
- Strict 60 – 90-day time limits for reporting of releases is enforced.
- Secondary containment apparatus limiting releases that require actions with cost that exceed the \$20,000 flat deductible.

The frequency calculation starts with the ultimate claim counts developed in Appendices F and G. Estimates of ultimate claim counts are calculated using two development methods.

The first method is a traditional closed with payment claim (CWP) development technique. The CWP development is based on the assumption that the relative change in a given claim year's CWP estimates from one evaluation point to the next is similar to the relative change in a prior claim year's CWP estimates at similar evaluation points. In utilizing this method, actual CWP data is evaluated. Successive years can be arranged to form a triangle of data.

Development Factors (DFs) are calculated to measure the change in cumulative CWP from one evaluation point to the next. These historical DFs form the basis for selecting the DFs used in projecting the current valuation of claim counts to an ultimate basis. In addition, a tail factor is selected to account for development beyond the observed experience. The tail factor is based on trends shown in the data. This method's implicit assumption is that the rate of closure of claims has been relatively consistent over time.

The second method is calculated similarly using all claims with payments (CWP + active) instead of CWP.

Ultimate water claims for claim years 7/21-3/22 and prior are selected on Appendix F, Page 1 (Appendix G for non-water). Selected ultimate claims are based on the two methods as well as current active claims. Future claims with payments reflect reporting lag, claims that reopen as well as current requests without any payments that may turn into paying claims.

Exhibit 2.1, Page 1 calculates frequency (claims per tank) using the selected ultimate claims and tanks provided by the Division of Underground Storage Tanks. Frequency trends are calculated using this data to determine expected frequency for future claim years. The current frequency is trended on Exhibit 2.1, Page 2 to select the prospective frequency.

Developing the claim counts and applying trend to the historical frequencies makes the averages more consistent with current conditions. Future frequencies on Exhibit 2.2 start with the frequency selected on Exhibit 2.1, Page 2 and apply the trends selected on Exhibit 2.1, Page 1.

### Projection of Fund Payments for Remediation and Monitoring

The estimated liabilities contained in this report are for cleanup, remediation and monitoring per site, net of the deductible and disallowed expenses. The Division of Underground Storage Tanks scrutinizes each request for reimbursement and disallows certain expenses that exceed the Division of Underground Storage Tanks' published guidelines. Information in Appendix A indicates the Division routinely disapproves approximately 8 percent of the total requested amount.

The deductible amounts have undergone changes during the life of the program. Beginning July 1, 2005 and for all years through 2021, the deductible is a \$20,000 flat deductible for all tank owners for cleanup. For third party liability, the deductible is also a \$20,000 flat deductible. Starting June 15, 2021 the deductible for releases in verifiable compliance was changed to \$5,000. If an owner fails to demonstrate compliance at the time of the release, the deductible will be either \$10,000, \$20,000 or \$30,000 determined by the level non-compliance. Historical deductibles are provided in Appendix B.

For the current claim years (7/21-3/22 and prior) estimated payments are calculated using development methods. Appendices D (water) and E (non-water) calculate ultimate payments by claim year. Two development methods are used, one with paid and pending amounts and the other with paid and pending severity. For the severity method, ultimate claims are multiplied by ultimate severity to determine ultimate payments.

Similar to the frequency calculation, severity is calculated using the selected ultimate losses divided by the ultimate claims to determine severity for future claims. Exhibit 8, Page 1 displays the historical ultimate severity and indicated trend, followed by trended and selected severity in Exhibit 8, Page 2. Exhibit 8, Page 3 provides the future severities.

Future payments for the auxiliary claims rely on the results from this analysis. For each claim year, a ratio of future payment to net paid amounts is calculated from the full analysis. This ratio is multiplied with the auxiliary net paid amounts to determine future payments for claim years with open claims.

### Payment Projections

The analysis has provided four projections of payments. These projections represent a range of estimated liabilities. The first projection labeled "Base" is the starting point. The "Base" case is an analysis on the historical data provided by the Division of Underground Storage Tanks. The new water monitoring systems data is not considered in the "Base" case.

Future payments for water (base) and non-water are calculated as the ultimate payments described above less the payments as of March 1, 2022. Future payments by fiscal year are calculated using the payment patterns developed in Appendices D (water) and E (non-water), Pages 2-5.

The closure rates developed in Appendices F (water) and G (non-water), Pages 2-5 are used to determine closed claims by fiscal year. Subtracting the closed claims from total claims results in the active claims by fiscal year.

We then develop three scenarios involving the implementation of the new water monitoring systems and different remediation time frames. The scenarios were developed through a collaborative effort of the Division and Pinnacle. These three scenarios are based on the water claim projections. The non-water claim projections are equal for all four projections. Scenario 1 is the best case estimate because the water cleanup time is two years. Scenario 2 has a four year water cleanup and is considered the most probable scenario. Then, the six year water cleanup timeframe for Scenario 3 is an adverse case estimate. All three scenarios assume an equal time frame for the water system installation, and further

assume that the installations are complete. Please note that actual results could be outside the range projected by the best case and adverse case scenarios.

Exhibit 5.1.2 provides the active claim counts for the base scenario. The base scenario is based on the old system of treating water claims. As of March 1, 2020 there are no longer any water claims being treated with the old system. We continue to review water claims with the old system to utilize the historical data. The base scenario receives no weight in our overall weighted indication.

Exhibits 5.2 through 5.4 provide active claim counts for Scenarios 1, 2 and 3. The Fund has provided the three scenarios by adjusting the expected number of years of corrective action needed. Exhibit 5.5.2 calculates the active non-water claim counts.

Exhibit 9 provides the average cost per request for the three water scenarios. Exhibits 10.2 through 10.4 combine the results of Exhibit 5 and Exhibit 9 to present the expected payments by fiscal year for each of the water scenarios. Payments by fiscal year for water (base) is provided in Exhibit 10.1 and non-water is in Exhibit 10.5

### Other Assumptions

The claim report year for any given release is defined based on the date of first request for reimbursement for a release. Historically, status had been defined on a site basis. In a few instances where there was more than one release for a site, if any claim (release) was active, the site status was open or active. Division records from 2004 and forward more accurately determine release status for each claim. The status information used in this analysis is accepted as provided.

The more vigorous enforcement of the one-year time limit for submitting requests for reimbursement has been in place since 2004. This added to the back log of requests that was built up in 2004. The backlog had been addressed and virtually eliminated by February 10, 2006. It is assumed that with more strictly enforced reporting requirements for suspected and known leaks, and with continued enforcement of the one year time limit for submitting requests, that leak and requests will become known in timely manner and an unknown backlog will not build again.

The starting point for the analysis is the historical information provided by the Division of Underground Storage Tanks. This information is provided in Appendix A. This exhibit summarizes the number of requests submitted for reimbursement to the trust fund as well as the disallowed amounts, deductibles and net amounts paid and pending made as of March 1, 2022. Requests for reimbursement, also referred to as "claims" in this report, are aggregated by the fiscal year in which

the claim was first filed with the Division of Underground Storage Tanks. Additional requests for reimbursement on these claims in later fiscal periods were aggregated under the original claim year.

### Diagnostics

Consistent with the prior analysis we provide various metrics to determine changes in the experience.

- Exhibit 1.1 provides a comparison to the analysis as of March 1, 2020.
- Exhibit 3 calculates the percentage of active claims by claim year. Column (7) shows the percentage selected in the prior analysis and Column (8) shows the percentage determined by the development methods.
- Exhibit 6 provides the history of average requests per year.
- Exhibit 7 provides average severity using historical deductible as well as the current \$5,000 deductible.

## DISCUSSION & ANALYSIS

### Required Reserves

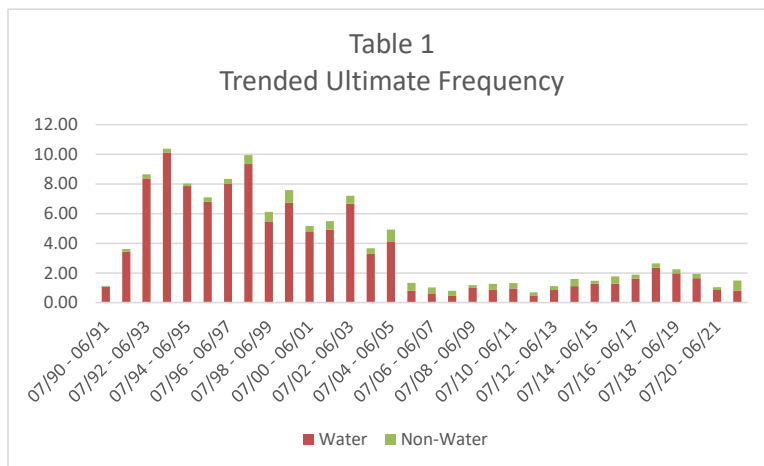

The estimated liabilities contained in this report are the product of historical experience, actuarial assumptions, quantitative analysis, and professional judgment. The starting point of the analysis is request for reimbursement data provided by the Division of Underground Storage Tanks evaluated as of March 1, 2022 as summarized in Appendix A.

The historical information has been summarized by aggregating the amounts paid by the Fund for a given site by claim report year. Cleanup at a contaminated site may take a number of years to achieve remediation with payments made by the trust fund over a corresponding period of time. The total number of claims in this table is the number of release reports which have resulted in payments made by the State trust fund on a leaking site. The number of closed claims indicates the number of sites that are classified by the Division of Underground Storage Tanks as tank closure (1), completed tank closure (1a), closure application expired (1b), line closure (1c), completed line closure (1d) or case closed (8). Other than a portion of the amounts shown as pending, no further payments are expected to be made by the trust fund on these sites. The number of closure claims refers to sites which are currently in the monitoring stage. The number of open claims refers to the number of sites that are being investigated or actively remediated.

The amount requested shows the amount requested for reimbursement by the tank owners. The Division applies a schedule of reasonable rate guidelines for various services. The disallowed amount is the amount by which the requested amount exceeds the published guidelines. After the requested amount is reduced by the disallowed amount, the deductible is applied. Beginning July 1, 2005 the deductible was changed to a \$20,000 flat, up-front deductible. Starting June 15, 2021 the deductible for releases in verifiable compliance will be \$5,000. If an owner fails to demonstrate compliance at the time of the release, the deductible will be either \$10,000, \$20,000 or \$30,000 determined by the level non-compliance. For a full listing of deductibles in effect prior to July 1, 2005, see Appendix B. The last three columns of Appendix A, Page 1 show the amount paid and pending by the State trust fund for cleanup of leaking underground storage tanks as of March 1, 2022, the net amount actually paid, and the approved amounts pending payment.

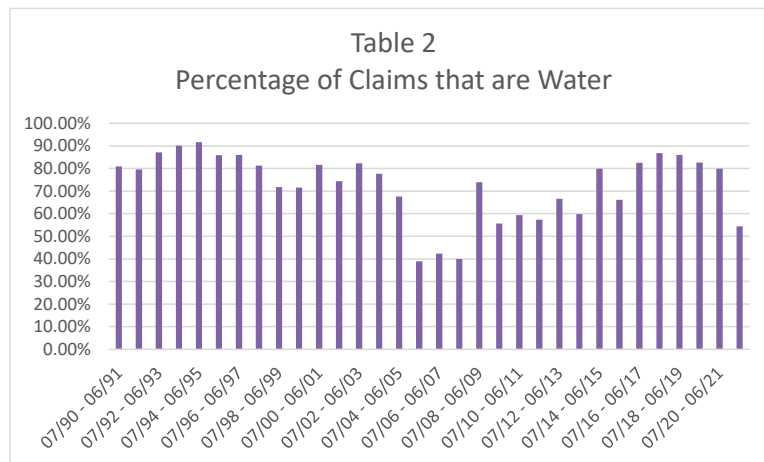

The actual amount of \$421.7 million paid and pending claims shown on Exhibit 1.1, Page 3 is greater than the 2020 report posted amount of \$413.1 million. In other words, paid and pending amounts have increased by approximately \$8.6 million in the last two years.

Table 1 shows the frequency of releases per 1,000 tanks, based on a water frequency trend rate of 0.0% and -5.0% for non-water.

An expected frequency of 2.60 releases per 1,000 tanks was selected in 2020 and decreased to 2.50 with this review. The dramatic reductions in frequency beginning with the 2006 claim year appear to have bottomed out. There was a concern that some tank owners are not reporting releases because of the \$20,000 up-front deductible. These unreported releases could have growing plumes that will be more difficult and costly to clean up at later dates. Frequency may increase with the lower deductible effective June 2021.

Future releases shown on Exhibit 2.2 are based on the selected frequency from Table 1, selected frequency and exposure trends from Exhibit 2.1, Page 1 and the projected tanks for 2022 provided by the TN UST. Although the number of claims declined dramatically in 2006, they appear to be somewhat stable since then.

The data in Table 2 shows an overall decreasing trend in the percentage of claims involving water through 2006, but those percentages have been steadily increasing from 2013-2018. The percentage of water claims for the most recent years may increase due to the slow reporting of water claims. Often claims originally recorded as non-water turn into water claims once water contamination is discovered.

The average cost per request adjusted to reflect the \$5,000 flat deductible in place since June 15, 2021 is provided in Exhibits 7.5 through 7.8. Claims involving water take longer to assess and plan before remedial action begins, and appear to have modest first year cost, mostly contained by the prior deductible of \$20,000. After the first year, average transaction costs are expected to be higher after the deductible is exceeded and actual remediation begins. The historical closed claim data indicates the average annual transaction cost remains relatively stable after the first payment period.

Exhibit 1.3 provides estimates of expected fund payments for remediation costs associated with releases reported during each of the 2023 through 2032 periods. These estimates are useful because they illustrate the amount needed to collect from tank fees and petroleum assurance revenue to pay for claims projected to be reported during each future period. Historically, revenues collected during fiscal periods were used to pay reimbursement requests regardless of when the release occurred. Moving to this view of funding remediation costs, the State should be clear that releases reported during prior periods have not been completely funded.

The estimated ultimate remediation costs shown for 2023 are calculated with current knowledge of reports and payments. Frequency of releases, reporting patterns, and average costs could and likely will change. The State should be very cautious when using the estimates for report periods 2023 through 2032. There are many assumptions upon which these estimates are based. Small changes in assumptions over many years could cause costs to vary significantly from those presented in Exhibit 1.3.

Exhibit 1.4 provides a review of the estimated ultimate payments by claim report year since program inception. This may be helpful in gauging the effects of potential differences in frequency of releases, average costs, and closing patterns (percent active) between the scenarios.

### Cash Flow

Projected claim payments by fiscal year are summarized on Exhibit E. The payments were derived in Exhibit 10 of the required reserve analysis and the Auxiliary Exhibits. Exhibit E separates the payments into current claims, those known by March 1, 2022, and future claims. Future claims were not determined for the auxiliary claims

Historical expenses provided by the Division are shown in Exhibit D. Based on the historical information and discussion with the Division, trends are selected to estimate future fiscal year expenses.

The TN UST revenue comes from six sources. The assurance fee is estimated in Exhibit F. The estimated assurance fee is less than prior years due to the reduction in fuel consumption during the COVID-19 restrictions. Fuel consumption changes are based on trends in mileage driven, purchases of more fuel-efficient vehicles and electric vehicles.

The historical tank fee and late penalty, civil penalty, miscellaneous revenue and department and federal revenue are reviewed in order to select the future revenue items. There is a current moratorium on tank fees, which is reflected for five years. The selections for these items are based on the long term averages.

The last revenue item is the interest earned on the Fund balance. The 1.0% selection is based on the investment yield of the three most recent years. The revenue items are shown on Exhibit C. The cash flows (Exhibit A) start with the Fund's cash balance as of March 1, 2022 and determine future cash balances using revenue and expenses in Exhibits C through F. Exhibit B projects future equity balances, the difference between total liability and current cash balance.

The cash flows are heavily impacted by the chosen exposure, frequency and severity trends shown in Table 3. The reduced revenue is also impacted by the decreasing exposure trend.

Table 3 Annual Trends				
	<u>Exposure</u>	<u>Frequency</u>	<u>Severity</u>	<u>Overall</u>
Water	-0.5%	0.0%	1.9%	2.4%
Non-Water	-0.5%	-5.0%	-5.0%	-9.3%

## FINDINGS

### Required Reserves

The required reserves for water are based on Pinnacle’s estimate of ultimate claims with payment and the Division’s three scenarios for water treatment. Scenario 1 is the best case estimate because the water cleanup time is two years. Scenario 2 has a four year water cleanup and is considered the most probable scenario. Then, the six year water cleanup timeframe for Scenario 3 is an adverse case estimate. The required reserve for non-water are based on the projected paid claims and payments using the development methods described previously.

Table 4 Change in Required Reserves (Excludes Auxiliary Claims)			
	<u>As of 3/01/2022</u>	<u>As of 3/01/2020</u>	<u>Change</u>
Current Liabilities	20,589,456	31,881,311	(11,291,855)
Paid and Pending	421,712,109	413,075,211	8,636,898
<u>Estimated Liability as of</u>			
6/30/2022	19,881,056	28,492,889	(8,611,833)
6/30/2023	21,077,902	29,473,820	(8,395,918)

The current liabilities (Scenario Weighted Water Estimate + Non-Water Estimate) as of March 1<sup>st</sup> has decreased from the prior analysis despite two years being added to the analysis as shown in Table 4. This reflects some of the older years developing better than expected.

Table 5 shows that there is little required reserves remaining for the older claim years. The required reserves reflect the Fund’s historical experience for non-water and the three scenarios for the water claims.

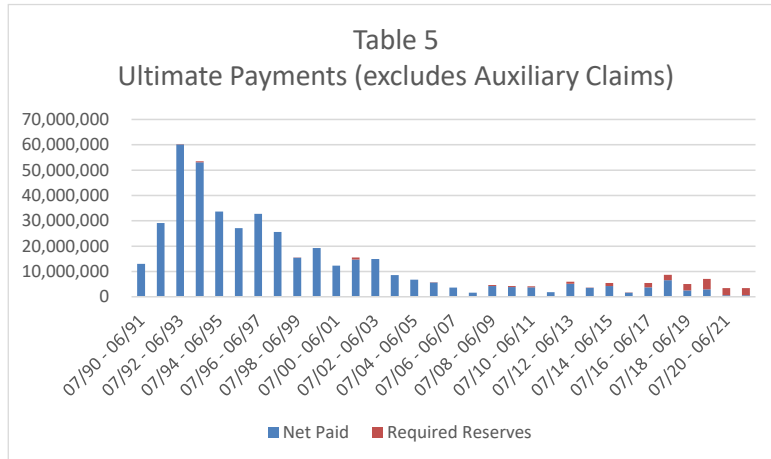

Table 6 provides the required reserves including the auxiliary claims.

Estimated Liability as of	Fund	Auxiliary	Total
6/30/2022	19,881,056	4,382,335	24,263,391
6/30/2023	21,077,902	3,202,848	24,280,750

Cash Flow

The results of our analysis are summarized in Exhibit A which displays projected cash flows, accounting for estimated fiscal year remediation payments, administrative costs, and revenues. It can be noted in the exhibit that the starting point is the cash balance of the TN UST as of March 1, 2022, which is \$46.7 million. The cash flow balance is projected to increase through 2023-24 then start decreasing.

Table 7 Cash Balance			
Fiscal Year	Projected Revenue	Projected Expenses	Cash Balance
07/21 - 03/22			\$46,718,831
03/22 - 06/22	7,797,825	4,019,612	50,497,044
07/22 - 06/23	22,754,800	21,050,225	52,201,619
07/23 - 06/24	22,512,700	22,439,225	52,275,094
07/24 - 06/25	22,158,500	23,659,765	50,773,829
07/25 - 06/26	21,697,700	24,702,413	47,769,117
07/26 - 06/27	23,152,200	24,499,799	46,421,517
07/27 - 06/28	22,533,400	24,546,008	44,408,910
07/28 - 06/29	21,884,800	24,172,679	42,121,030
07/29 - 06/30	21,295,400	24,498,988	38,917,443
07/30 - 06/31	20,756,900	24,896,171	34,778,172
07/31 - 06/32	20,223,000	25,532,302	29,468,870

However, one must keep in mind that cash flow is only one important metric. A second metric should also be considered, which we define as the “Equity” Balance as displayed in Exhibit B. The equity balance takes into consideration not only the revenues coming in and expenses going out each year, but it also accounts for any projected outstanding liability based on our actuarial estimates of the TN UST at each fiscal year-end. As noted in column (8) of Exhibit B, we have projected outstanding liabilities for all incidents at \$20.59 million as of March 1, 2022 excluding the auxiliary claims. The future claims liabilities include the auxiliary claims. In consideration of the cash balance as of that same time from Exhibit A, that implies a decreasing equity balance starting in 2025-26.
