APPENDICES

GUIDANCE FOR UNDERSTANDING AND INTERPRETING THE FINAL 2008 303(d) LIST

June, 2008

What Is the 303(d) List and Why Is It Important?

The 303(d) List is a compilation of the streams and lakes in Tennessee that are "water quality limited" or are expected to exceed water quality standards in the next two years and need additional pollution controls. Water quality limited streams are those that have one or more properties that violate water quality standards. They are considered impaired by pollution and not fully meeting designated uses.

Additionally, the 303(d) List prioritizes impacted streams for specialized studies called Total Maximum Daily Load (TMDL). In one waterbody, Barkley Reservoir, a Total Maximum Daily Thermal Load study is needed.

The 2008 303(d) List will update and when finalized, will replace the previous one published in 2006.

Once a stream has been placed on the 303(d) List, it is considered a priority for water quality improvement efforts. These efforts include traditional regulatory approaches such as permit issuance, but also include efforts to control pollution sources that have historically been exempted from regulations, such as certain agricultural and forestry activities.

If a stream is on the 303(d) List, the Division cannot authorize additional loadings of the same pollutant(s). In extreme cases, it may mean that dischargers will not be allowed to expand or locate on 303(d) listed streams until the sources of pollution have been controlled.

WHAT'S NEW FOR 2008

Reassessment of Group 4 and Group 5 Watersheds.

In developing the draft 2008 assessment, the Division used all readily available information. Consistent with the Division's watershed approach, the major difference between the 2006 and 2008 versions of the List is the reassessment of the Group 4 and 5 watersheds. It is in these areas of the state that the reviewer will note the most significant assessment changes.

When the assessments for the Group 4 watersheds were undertaken in 2006, chemical data were available. However, many of the RBPIII biological samples had not yet been fully processed. (In an RBPIII survey, invertebrate collections are taken to a laboratory for identification to genera.) As a result of the department's desire to meet the statutory deadline of April 1, 2006 for completing the assessment, only chemical data could be used in that revision. For Group 4 watersheds, the biological results have now been fully incorporated.

Continued Incorporation of Elements of EPA's Integrated Reporting Guidance.

In the 2008 303(d) List, we have continued the use of EPA's new assessment categories. These categories are explained in more detail on the following page.

303(d) ASSESSMENT CATEGORIES USED IN 2008

The assessment categories suggested by EPA have been incorporated into the development of the 2008 303(d) List. Each stream or lake in Tennessee has been placed into one of the following categories.

Category 1	Waterbody or waterbody segment meets all designated uses.
Category 2	Waterbody or waterbody segment meets some designated uses, but data are not available in order to determine whether all uses are being met.
Category 3	Insufficient data exists to determine whether any uses are being met.
Category 4A	One or more uses are not being met. However, TMDLs have been completed and approved for all listed pollutants.
Category 4B	One or more uses are not being met. However, a TMDL is not needed because compliance with water quality standards will be achieved in the short-term by a more traditional approach, such as permitting or enforcement.
Category 4C	One or more uses are not being met. However, the impairment is not being caused by a pollutant.
Category 5	One or more uses are not being met. A TMDL is needed for the listed pollutants.

Notes concerning the above categories:

1. As with the 2006 list, Tennessee has used Category 4C for segments impacted by flow alteration. The basis for this is that flow alteration is not a pollutant and a TMDL would not be helpful. In a few cases, commenters suggested the inclusion of additional pollutants as 4C. See the *Summary of Public Comments and Departmental Responses* for additional information.

2. Additionally, we did not place any streams into Category 4B, although candidates waters were suggested during the comment period. These were cases where commenters thought that on specific streams, traditional approaches such as permitting or enforcement would lead to water quality standards being met in the short-term. See the *Summary of Public Comments and Departmental Responses* for additional information.

3. Category 4A was only used for those streams where all TMDLs have been completed. If additional TMDLs were needed in a segment, it was identified as Category 5.

How Were the Waters of Tennessee Assessed for this Document?

The assessment of Tennessee's waters was based on a water quality evaluation that took place during 2006 and 2007. Water quality data collected at hundreds of streams in Tennessee were compared to existing water quality criteria (Chapter 1200-4-3-.03). Data were compared to numeric water quality criteria, or in the case of substances with narrative criteria (criteria based on verbal "free from" statements), data were compared to ecoregion reference stream data from the appropriate sub-ecoregion.

Details of the monitoring design and assessment process are provided in TDEC's *Quality Assurance Project Plan (QAPP) for 106 Monitoring in the Division of Water Pollution Control*. This document is posted on the department's webpage.

Information concerning monitoring design and sampling procedures of the agencies that supplied additional data used in Tennessee's assessment process can be requested from the specific agencies.

Which Tennessee Streams Are Not On the 303(d) List?

Streams considered unpolluted (Categories 1 or 2), plus streams that the Division cannot assess due to a lack of water quality information (Category 3), are not found on the List.

Thus, any stream not on the 303(d) List can be assumed to be either unassessed or unpolluted.

On What Basis Can Waterbodies Be Removed From the 303(d) If They Were Listed In a Previous Version?

The 303(d) List is designed to be a flexible document that can be updated as new information becomes available. EPA must approve revisions to the document and has identified several acceptable reasons for removing or delisting a stream from the 303(d) List:

The stream was listed in error originally. An example of this might be if a water quality standard was improperly applied, such as the wrong hardness was used to calculate metals criteria.

The stream's status changes. A waterbody or a portion of a waterbody might be ruled a wet weather conveyance rather than a stream. (Different criteria apply to wet weather conveyances.)

Water quality standards change. The 303(d) is a compilation of streams that violate state water quality standards. If standards change through the triennial review process, the list can be adjusted.

The stream has improved. If the quality of the stream improves and no longer violates criteria for the parameter(s) of concern, the stream can be removed from the List. Documentation of the improvement is necessary.

Appendix A contains a list of the streams proposed for delisting due to water quality improvement. A rationale for each delisting is provided.

Additionally, Davis Mill Creek was proposed for delisting on the basis that its status has changed. See Appendix B for more information

Did the Division Use All "Readily Available Data" In the Water Quality Assessment Process?

The Division utilized its own water quality data, plus that collected by other agencies and entities in Tennessee. EPA's STORET database was utilized as a primary source of water quality data. Additionally, the Tennessee Valley Authority, the U.S. Army Corps of Engineers, and the U.S Geological Survey were contacted directly as none of these agencies currently use STORET.

In January of 2008, the Division issued a public notice informing Tennesseans that a draft statewide water quality assessment had been performed and that those entities with additional water quality data could submit them to be used in the formal review process. Most of the data we received were submitted by other agencies.

Are There Any Data Sources That the Division Chose To Not Use in the Assessment Process?

No. We used all the data that were submitted. However, it should be noted that not all data submitted were used to independently list streams as impacted. Where questions about sampling techniques or analysis methodologies could not be easily resolved, submitted data were used to screen streams for future studies.

During the review process for the draft 303(d), additional water quality data were brought to our attention. These data were also factored into our final decision concerning the status of specific streams.

See the *Summary of Public Comments and Departmental Responses* for additional information.

Agency Data Submitted for Consideration in the 2008 303(d) Assessment Process

Agency	Physical Data	Biological Data	Chemical Data	Bacteriological Data
US Environmental Protection Agency	X	X	X	X
US National Park Service	X	X	X	
US Army Corp of Engineers	X	X	X	
Tennessee Valley Authority	X	X	X	X
US Geological Survey	X	X	X	X
Tennessee Wildlife Resources Agency	X	X		

What Is the Watershed Cycle?

In 1996, the Division of Water Pollution Control restructured monitoring and permitting activities on a rotating watershed basis. Each watershed will be examined on a five-year cycle as illustrated by the map on the next page.

A typical cycle will generally include:

Year 1 Hold planning meetings with "stakeholders". Stakeholders include citizens, environmental groups, other governmental agencies, municipalities, industries, and other interested parties. Develop a monitoring plan.

Year 2 Collect water quality data.

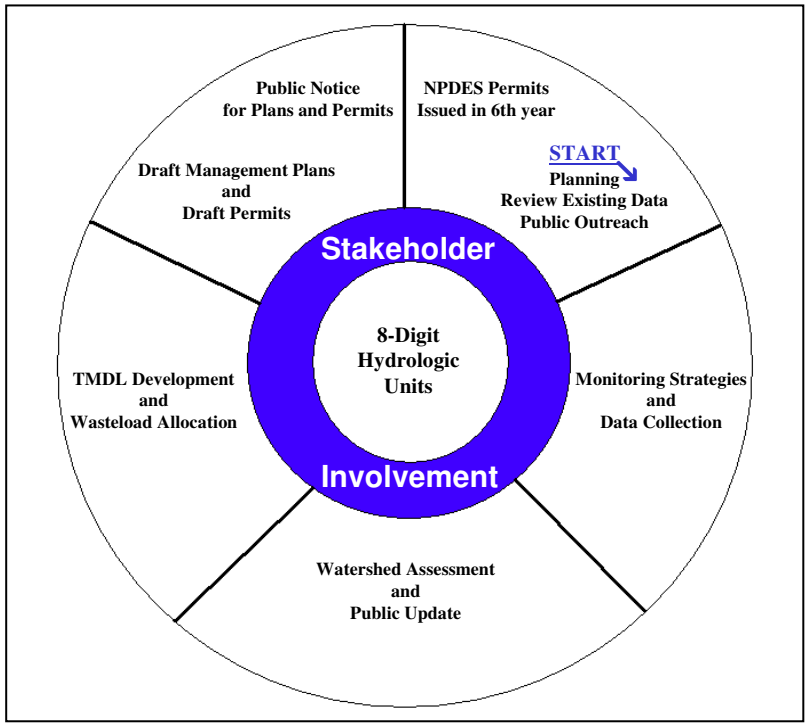
Year 3 Collect water quality data.

Year 4 Water quality assessment activities. Perform modeling and TMDL generation

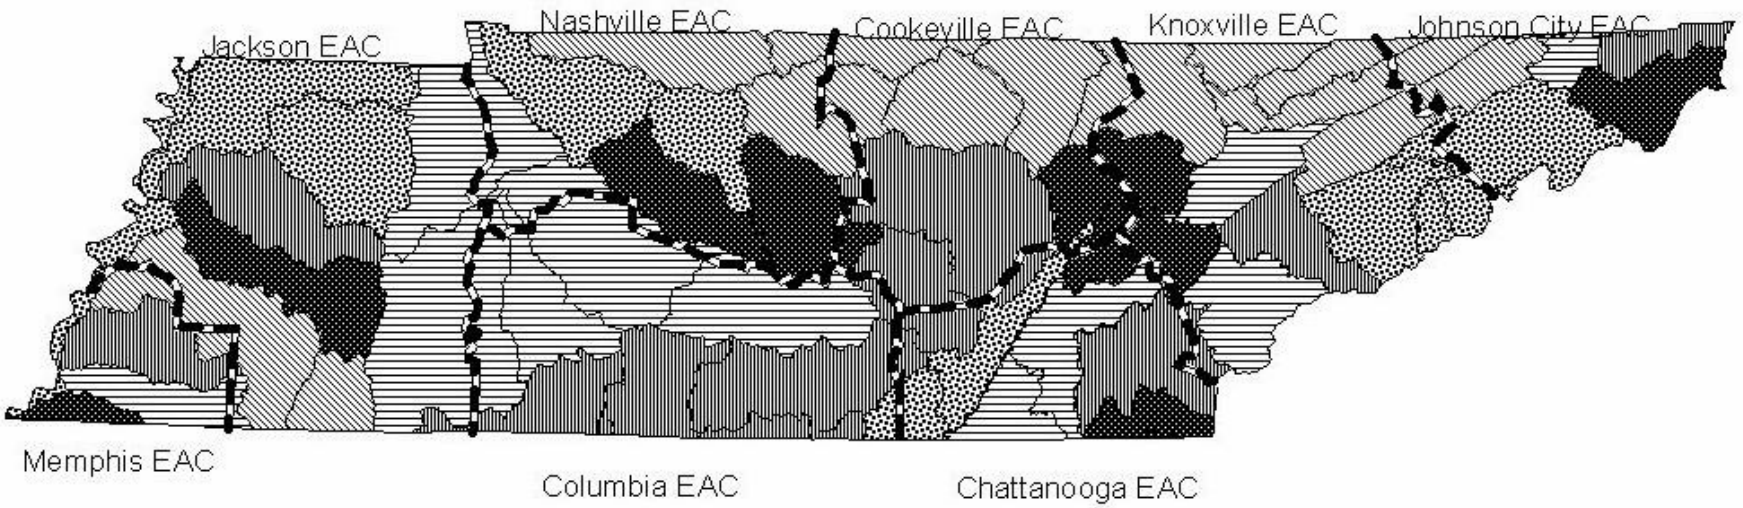
Year 5 Publish a watershed plan, which includes the proposed actions to be taken to insure that water quality standards will be met. Issue draft NPDES permits and hold public hearings.

Year 6 Issue final permits after comments have been addressed. Begin cycle again in sixth year.

Stream inventoried on the 303(d) List as violating one or more water quality criteria must be scheduled, on some priority basis, to have a TMDL developed to assist in the identification of control strategies.



Tennessee Watershed Management Approach



Group 1 (1996)
Group 3 (1998)
Group 5 (2000)
Group 2 (1997)
Group 4 (1999)
EAC Boundary

What Is a TMDL?

A Total Maximum Daily Load (TMDL) is a study that (1) quantifies the amount of a pollutant in a stream, (2) identifies the sources of the pollutant, (3) and recommends regulatory or other actions that may need to be taken in order for the stream to no longer be polluted. Following are actions that might be recommended:

- Re-allocate limits on the sources of pollutants documented as impacting streams. It might be necessary to lower the amount of pollutants being discharged under NPDES permits or to require the installation of other control measures, if necessary, to insure that standards will be met.

- For sources the Division does not have regulatory authority over, such as ordinary agricultural and forestry activities, provide information and technical assistance to other state and federal agencies that work directly with these groups to install appropriate BMPs.

Even for impacted streams on the 303(d) List, TMDL development is **not** considered appropriate for all bodies of water. Additionally, in cases involving pollution sources in other states, the recommendation may be that another state or EPA develops the TMDL.

How Are the TMDLs Prioritized?

Tennessee's TMDL prioritization schedule has been based on a 1998 agreement between EPA and the Department. Under this schedule, the Department committed to the development of all TMDLs for 303(d) listed streams by the year 2011. For its part, EPA committed to provide better guidance and new tools for TMDL generation.

A few years later, the same schedule was formalized by being included as part of a Consent Decree between EPA and environmental groups. Thus, for the next two years, the Division has decided to base its TMDL priority for each body of water on the 303(d) List based on the agreement reached with EPA.

How Did Citizens Participate in this Process?

Once the draft 303(d) was published in January, the Division will accepted comments until March 17, 2008. Additionally, citizens were able to provide verbal comments at a series of public meetings in February and March. The list of these meetings appears on the next page.

The January notice specifically requested data which the public felt was relevant to a listing, or to a stream not currently listed. The notice requested that such data include some basic information such as detailed station locations and the QA/QC procedures used during the sample collection and analysis process.

Additionally, the notice stated that departmental staff were available to meet with groups or individuals to discuss specific listings. Several groups scheduled meetings with staff.

Following the conclusion of the formal comment period, a response was prepared for each comment. Our responses were included in a companion document that can be found on our webpage.

The responses indicated whether or not a revision was made based on the specific comment received. If a comment did not result in a revision, we explained our rationale for not making a change.

2008 303(d) List Public Meeting Schedule

WATERSHED	DATE	LOCATION	LOCAL TIME
Southeastern Tennessee	February 21	Chattanooga EFO Main Auditorium State Office Building 540 McCallie Ave, Chattanooga	1:30 pm
Middle Tennessee	February 22	Ruth Neff Conference Room 17st Floor, L & C Tower 401 Church Street, Nashville	1:30 pm
Southwestern Tennessee	February 25	Memphis EFO Conference Room Suite E-645 Perimeter Park 2510 Mount Moriah Road, Memphis	1:30 pm
West Tennessee	February 26	Jackson EFO Conference Room 1625 Hollywood Drive, Jackson	1:30 pm
Northeastern Tennessee	March 3	Johnson City EFO Main Conference Room 2305 Silverdale Road, Johnson City	1:30 pm
East Tennessee	March 4	Knoxville EFO Main Conference Room 3711 Middlebrook Pike, Knoxville, TN	1:30 pm

Key to 303(d) List

WATERBODY ID

In 1988, the Division divided the state's waters into "waterbodies" and created a database of information about each. Each waterbody has an ID based on EPA's River Reach System. The first eight digits of the ID (after TN) are the USGS HUC Code number. The next three or four digits are the reach number assigned to the stream by EPA. The last four digits is the segment number assigned to each stream section for the Assessment Database (ADB). There is also a GIS coverage for listed streams.

The 303(d) List is sorted in hydrologic order within each major watershed basin. The NRCS watershed number for the segment is available through the ADB.

WATERBODY

The name of the main body of water within the waterbody is provided as **NAME.**

COUNTY

The county or counties where the waterbody is located.

MILES/ACRES IMPAIRED

If the stream is considered impaired (not meetings water quality standards), the number of impacted miles or acres (according to Reachfile 3) is shown in this column. Lake acres are noted as "ac".

CAUSE

The pollutant or pollutants exceeding water quality standards is identified.

SOURCE

The general source of each pollutant exceeding water quality standards within the waterbody is identified. (For both causes and sources, the Division uses categories provided by EPA in order to be consistent with language used by other states.)

TMDL Priorities

It should be noted that TMDL priorities are parameter specific and methodologies have not yet been developed for all substances or conditions. Thus a stream that has multiple causes of impairment may be high priority for one cause, but low priority for another.

HIGH (H) Tools are available to produce the TMDL and the stream is in one of the watersheds being studied in the next two years. The TMDL will be produced in the next two years.

MEDIUM (M) Tools are available to produce the TMDL, but the stream is not in a watershed being studied in the next two years. TMDL will be produced in the next five years.

LOW (L) Tools are not currently available to produce the TMDL and the stream is not in the watershed being studied in the next two years. TMDL will be produced in the next twelve years.

NOT APPLICABLE (NA)

4a - A TMDL has already been completed, submitted to EPA, and approved by EPA.

4c – The impact to the stream is not being caused by a pollutant.

Final Version - YEAR 2008 303(d) LIST FOR THE STATE OF TENNESSEE

Barren River Watershed

This small basin is USGS Hydrologic Unit Code 05110002 and flows into Kentucky as part of the Barren River watershed.

Waterbody ID	Impacted Waterbody	County	Miles/Acres Impaired	CAUSE / TMDL Priority		Pollutant Source	COMMENTS
TN05110002 008 – 0550	UNNAMED TRIB TO WEST FORK DRAKES CREEK	Sumner	2.7	Flow Alterations	NA	Upstream Impoundment	Randomly selected for Impounded Streams Survey. Stream is Category 4C. (Impairment nor caused by a pollutant.)
TN05110002 008 – 0600	DONAHO BRANCH	Sumner	3.0	Nitrate+Nitrite Total Phosphorus Physical Substrate Habitat Alterations Escherichia coli	M M H NA	Collection System Failure Urbanized High Density Area Channelization	Category 5. (One or more uses impaired.) However, EPA has approved a pathogen TMDL which addresses some of the known pollutants.
TN05110002 010 – 0300	DAVIS BRANCH	Macon	1.6	Flow Alterations	NA	Upstream Impoundment	Randomly selected for Impounded Streams Survey. Stream is Category 4C. (Impairment nor caused by a pollutant.)

APPENDIX A: Streams (or pollutants) on the 2006 303 (d) List That Have Been Delisted in 2008 For Reasons Related to Water Quality

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN05130101 015 – 0750	TACKETT CREEK	Claiborne	7.84	Loss of biological integrity due to siltation	Surface Mining	The upper part of Tackett Creek has traditionally been considered impacted by silt from resource extraction (coal). In 2007, a consultant for the mining company performed SQSH surveys consistent with TDEC SOPs at mile 13.7 (u/s Spruce Lick Branch) and at mile 15.5 (u/s 3191 Mine). At mile 13.7, the survey documented 16 EPT genera and 34 total genera and scored 40 on the TMI. At mile 15.5, 24 EPT genera and 41 total genera were found. The TMI score at the upper site was 42. Both of these sites scored extremely well on the TMI and appear to have improved.
TN05130104 051 - 1000	ROARING PAUNCH CREEK	Scott	17.9	Loss of biological integrity due to siltation	Petroleum Activities	Only the headwaters of this stream are in Tennessee. In 2004, TDEC established a chemical and biological monitoring station at mile 15.7 (just u/s Kentucky stateline). The SQSH got an excellent score, 38, and documented 10 EPT genera, and 27 total genera. The habitat score was 145. The data indicate that this stream has improved since last tested.
TN05130104 PKTLK_1000	PICKETT LAKE	Pickett	5.0 ac	Nutrients pH Noxious aquatic plants	Hydrologic Modification	Pickett Lake is a small impoundment within Pickett State Park in Pickett County. Approximately twenty years ago, the Division did some testing in the lake following complaints that rooted aquatic plants were interfering with recreational boating. At the time, staff concluded that there were no man-made pollutant sources to the lake and that most of the nutrients were from decaying leaves in the heavily wooded watershed. The growth of rooted plants was a due to the nutrients, plus outstanding water clarity. Because of the concerns about boating, the lake was listed and at one time was considered a candidate for a 314 Clean Lakes project. Pickett Lake has been on the 303(d) List for many years. However, there have not been any complaints about aquatic plants in many years. It is ironic that water clarify may no longer be as good in the lake and may have shaded out the rooted plants. Regardless, we no longer consider listing appropriate for a lake that never had anything but natural sources of nutrients. The original listing of pH was because Mill Creek, the stream impounded by the dam, was listed for pH. However, Mill Creek has been delisted for pH due to water quality improvement.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN05130105 015 – 2000	WEST FORK OBEY RIVER	Overton	13.1	Metals pH Loss of biological integrity due to siltation	Abandoned Mining	In 2005 TDEC established chemical monitoring stations at river mile 8.0 (off Hwy 52) and at 9.5 (Shiloh Road). There were no violations of criteria at these sites. Additionally, in 2005 biorecon were done at mile 14.6 (Highway 85) and at mile 20.1 (Dry Hollow Road). At mile 14.6, 8 EPT families, 5 intolerant, 20 total families were documented, with a habitat score of 147. At mile 20.1, 10 EPT families, 8 intolerant, and 20 total families were found with a habitat score of 134. Both sites passed biocriteria. This stream appears to have improved due to efforts to reclaim previously mined areas.
TN05130107 023 – 0200	DRY CREEK	Warren Sequatchie	31.25	Sulfates	Abandoned Mining	We believe we were in error to list sulfates originally. Sulfate does not have a numeric criterion for the specified use classifications of this stream. Sulfate is non-toxic to fish and aquatic life. It is a chemical reaction salt of the oxidation of iron sulfides associated with coal mine discharges and abandoned mine discharges to this stream. Sulfate is used as an indicator parameter for the presences of acid rock drainage. Sulfate cannot be removed from the water column using conventional chemical treatment. This stream will remain listed for the other pollutants, including pH.
TN05130201 021-0600	BIG CANEY BRANCH	Wilson	6.3	Loss of biological integrity due to siltation Other Habitat Alteration	Pasture Grazing	In 2004, TDEC established a biological station at mile 0.1 (Commerce Road). The stream looked much better than it had during the 2001 survey. A biorecon following the Division's SOP documented 10 EPT families, 6 intolerant, and 24 total families in 2004. Habitat measured 110. These scores met the Department's regional goals based on interpretations of the narrative biological criterion. It now seems possible that the low biorecon score noted in 2001 was due to periodic dryness rather than by pollutants.
TN05130202 007 – 0300	FINLEY BRANCH	Davidson	1.2	Chlorine	Industrial Point Source	The industry that previously discharged chlorine to the stream is now gone. Monthly sampling at mile 0.12 (Curry Road) did not indicated any chlorine problems in 2005. One bad thing about the lower chlorine levels in the stream is that now pathogen levels are up and the stream will be listed for that.
TN05130202 007 – 3000	MILL CREEK	Davidson	5.9	Escherichia coli	Collection System Failure Discharges from MS4 area	Metro collected samples at mile 12.4 (Antioch Pike). The geo mean of five E. coli observations from July 2007 was 32 cfu. In 2005-06 TDEC chemical station at mile 11.0 (u/s Franklin-Limestone Bridge), one out of 12 E. coli observations was over 487. Metro's rehabilitation of their collection system has helped pathogen levels in this system. The stream will need to remain listed for pollutants affecting fish and aquatic life.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN05130202 007 – 5000	MILL CREEK	Davidson Williamson	8.1	Escherichia coli	Municipal Point Source Livestock in Stream	Nolensville is now connected to Nashville and no longer has a discharge point on Mill Creek. Metro Nashville collected samples in 2007 at Concord Road. The geo mean of five E. coli observations from July 2007 was 65 cfu. Additionally, in 2005-06 TDEC monitored pathogen levels at a station at mile 22.2 (Sunset Road). Only one out of 9 E. coli observations were over 487. The stream will need to remain listed for the pollutants affecting fish and aquatic life.
TN05130202 010 – 0300	DRY FORK	Davidson	9.9	Escherichia coli	Undetermined Source	In 2005-06 TDEC monitored pathogen levels at a station at mile 0.4 (Dry Fork Road). Zero out of 11 E. coli observations were over 941 cfu. E. coli levels better due to Metro's rehabilitation of sewer lines.
TN05130202 010 – 0400	EARTHMAN FORK	Davidson	11.0	Escherichia coli	Undetermined Source	In 2006, TDEC performed a biorecon at mile 0.4 (Whites Creek Pike). The survey scored a perfect 15 (10 EPT families, 7 intolerant, 22 total families). Additionally, in 2005-06 TDEC monitored pathogen levels at a station at mile 0.4 (Dry Fork Road). Zero out of 11 E. coli observations were over 941 cfu. E. coli levels thought to have improved in part due to Metro's rehabilitation of sewer lines.
TN05130202 010 – 0600	CUMMINGS BRANCH	Davidson	2.6	Escherichia coli	Livestock in Stream	This stream was originally listed because of pathogen data provided by Metro Nashville from 1996-97. In 2005-06, TDEC monitored pathogen levels at a station at mile 0.4 (Scott Road). Zero out of 11 E. coli observations were over 941 cfu. Our new data did not confirm Nashville's previous results or indicate that the stream should remain listed.
TN05130202 010 – 0700	LITTLE CREEK	Davidson	6.2	Escherichia coli	Discharges from MS4 area	This stream was originally listed because of pathogen data provided by Metro Nashville from 1996-97. In 2005-06, TDEC monitored pathogen levels at a station at mile 1.2 (off Old Hickory Blvd). One out of 11 E. coli observations was over 941 cfu. (The one exceedence was thought to be a rain event.) Metro also collected data in 2007 that indicated that the criterion was being met. These new data did not confirm Nashville's previous results or indicate that the stream should remain listed. However, the stream will need to remain listed for the pollutants impacting fish and aquatic life.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN05130202 010 – 0800	EWING CREEK	Davidson	17.6	Escherichia coli	Discharges from MS4 area	This stream was originally listed because of pathogen data provided by Metro Nashville from 1996-97. In 2005-06, TDEC monitored pathogen levels at a station at mile 0.8 (Whites Creek Pike). One out of 11 E. coli observations were over 941 cfu. (The one exceedence was a storm event.) Additionally, in 2003-2004 Metro collected pathogen samples at mile 0.8 (Whites Creek Pike) and at Richman Hills Drive. At mile 0.8, zero out of 6 E. coli observations were over 941. At Richman Hills Pike, zero out of 5 E. coli observations were over 941. Neither TDEC nor recent Metro data confirm Nashville's previous results or indicate that the stream should remain listed for pathogens. However, Ewing Creek will need to remain listed for habitat alterations.
TN05130202 014 – 0400	NORTH FORK SYCAMORE CREEK	Robertson	15.4	Loss of biological integrity due to siltation Other Habitat Alterations	Hydromodification	This stream was listed in 2002 due to a poor biorecon score from 2001 and a significant development that was negatively impacting water quality. Enforcement actions were taken against the development and in 2005, TDEC performed a biorecon at mile 0.1 (Dividing Ridge Road). The biorecon survey documented 9 EPT families, 6 intolerant, and 22 total families. The biorecon score at this site was 13. The habitat score was 116. It appears this stream has recovered from impacts from previous severe habitat alterations from the development.
TN05130202 314 – 0100	UNNAMED TRIB TO RICHLAND CREEK	Davidson	1.1	Escherichia coli	Discharges from MS4 area	This very small tributary was listed as a result of a pathogen survey done by Metro Nashville in 1996. The trib has now been encapsulated by the expansion of the Interstate 40 interchange at White Bluff Road/Briley Parkway. The stream is fenced off on state property now. In 2007, METRO did an E. coli survey at mile 0.1 (under I-40). The August geo mean of five samples was 99 cfu. We think that due to the low 2007 levels and the lack of physical public access to the stream, it should no longer be listed.
TN05130202 314 – 3000	RICHLAND CREEK	Davidson	4.0	Escherichia coli	Collection System Failure Discharges from MS4 area	The lower section of Richland Creek is posted, but the upper section has always had lower levels. In 2007, METRO did an E. coli survey at mile 6.9 (West End near Kroger). The August geo mean of five samples was 75 cfu. In 2005, TDEC performed a pathogen survey at mile 6.9 (West End near Kroger). One out of 12 E. coli observations were over 941 cfu. 2004 Metro had another pathogen station at mile 7.2 (West Tyne Blvd). Zero out of 19 E. coli observations were over 941. Upper Richland Creek will need to remain listed for other pollutants.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN05130205 015T - 1300	BRUSH CREEK	Montgomery	11.6	Loss of biological integrity due to siltation	Pasture Grazing	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a SQSH survey and a biorecon at mile 1.9 (u/s Beardon Ridge Road). The SQSH scored 40 on the Tennessee Macroinvertebrate Index, an almost perfect score. The biorecon survey documented 6 EPT families, 3 intolerant, and 20 total families. The habitat score for this site was 119. It appears that this stream has improved.
TN05130206 019 - 0321	FREY BRANCH	Robertson	7.2	Unionized Ammonia	Municipal Point Source	The sewage treatment plant for the town of White House previously had an issue with elevated ammonia levels. However, the STP has been upgraded and the new plant no longer appears to have this problem (confirmed by stream monitoring at out station at mile 0.5). However, the stream will need to remain listed for other pollutants.
TN05130206 024 - 0300	AUSTIN BRANCH	Sumner	3.9	Loss of biological integrity due to siltation	Pasture Grazing	In 2004, TDEC established a biological station at mile 0.4 (West Harper Road). The stream looked better than it had during the 2001 survey. A biorecon following the Division's SOP for biological monitoring documented 8 EPT families, 4 intolerant, and 25 total families in 2004. Habitat measured 112. These scores met the Department's regional goals based on interpretations of the narrative biological criterion.
TN05130206 024 - 0400	HALL TOWN CREEK	Sumner	6.4	Loss of biological integrity due to siltation Other Habitat Alterations	Pasture Grazing	In 2004, TDEC established a biological station at mile 0.2 (Morris Road). The stream looked much better than it had during the 2001 survey. A biorecon following the Division's SOP for biological monitoring documented 11 EPT families, 6 intolerant, and 24 total families in 2004. Habitat measured 112 and the biorecon scored 15 (perfect score). All these scores met the Department's regional goals based on interpretations of the narrative biological criterion.
TN05130206 034 - 0200	PINEY FORK	Stewart Montgomery	38.5	Loss of biological integrity due to siltation	Habitat Modification	This stream has been dry when observed following the original assessment and was also dry in 2004. The habitat score for mile 0.4 was 144. It is now believed that the previous appearance of impacts in this stream was due to periodic dryness rather than pollution.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN06010104 019 - 2000	FLAT CREEK	Union Knox	2.8	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Hydromodification Dam Construction	This stream has improved following remediation actions at Global Stone. 2004 TDEC biorecon and pathogen station at mile 15.3 (Highway 61). 17 EPT genera, 13 intolerant, 49 total genera. Biorecon score = 15. Habitat score = 130. In 2004, TDEC established a biological station at mile 15.3 (Hwy 61). The stream looked much better than it had during the 2001 survey. A biorecon following the Division's SOP for biological monitoring documented 17 EPT genera, 13 intolerant, and 49 total genera. Habitat measured 130 and the biorecon scored 15 (perfect score). All these scores met the Department's regional goals based on interpretations of the narrative biological criterion. However, the stream will need to remain listed for pathogens.
TN06010107 007 – 1000	LITTLE PIGEON RIVER	Sevier	3.5	Escherichia coli	Septic Tanks Collection System Failure	The most downstream segment of the Little Pigeon (between Sevierville and the French Broad) currently has a water contact advisory due to pathogens. However, Sevierville's sewage treatment plant discharge has been diverted from the Little Pigeon to the French Broad. In 2005-06, TDEC performed a pathogen survey at mile 0.7 (Hwy 338). The highest E. coli level measured was 12. We intend to recommend that the contact advisory be lifted.
TN06010107 010 – 1900	WALDEN CREEK	Sevier	2.6	Loss of biological integrity due to siltation	Land Development	In 2005, TDEC collected a SQSH at mile 0.5 (Tiger Road). The results of the survey generated an Index score of 34, which is passing. Five EPT and 25 total genera were documented. The habitat score was 110. The stream will need to remain listed for pathogens and we will continue to watch it due to the rapid development in this area. Hopefully, the improvement in this stream is due to improved construction techniques.
TN06010107 029T - 1150	CLEAR CREEK	Jefferson Cocke	13.6	Nutrients	Pasture Grazing	This stream was originally assessed as impacted by nutrients on the basis of a visual assessment of algae during a biological survey that indicated that the streams was impacted. In 2005, TDEC collected a SQSH at mile 2.7 (Rainwater School Road). The results of the survey generated an Index score of 32, which is passing. Four EPT genera and 31 total genera were documented. The stream will need to remain listed for pathogens, but still appears to have improved and no longer has an obvious algae problem.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN06010108 001 - 0200	TURKEY CREEK	Hamblen	5.8	Loss of biological integrity due to siltation	Pasture Grazing	This stream was listed due to a TDEC biorecon in 2000 and a TVA biorecon in 2002 that did not pass. In 2005, TDEC collected a SQSH sample at mile 0.1 (u/s Bent Ridge Road). The results of the survey generated an Index score of 32, which is passing. Seven EPT and 28 total genera were documented. The habitat score was 126.
TN06010108 001 - 1000	NOLICHUCKY RIVER	Hamblen Cocke	4.0	Escherichia coli	Agriculture	This stream was listed for pathogens as a result of data collected by another agency in the late 1990's. In 2005-06, TDEC established a pathogen station at mile 5.3 (Hales Bridge). None of the 12 E. coli observations exceeded 487 cfu. The stream will need to remain listed for siltation.
TN06010108 001 - 2000	NOLICHUCKY RIVER	Hamblen Cocke	7.7	Escherichia coli	Pasture Grazing	This stream was listed for pathogens as a result of data collected by another agency in the late 1990's. This segment is bracketed by 2005-06 pathogen stations at mile 6.0 and at mile 20.8. E. coli levels were low at both stations.
TN06010108 005 - 0800	KYKER BRANCH	Greene	2.5	Loss of biological integrity due to siltation	Pasture Grazing	This stream was listed in 2002 as a result of a survey conducted in 2000. In 2005-06 TDEC established a SQSH station at mile 0.1 (Offinger Dairy driveway). The SQSH documented 8 EPT genera and 32 total genera, with a very good habitat score of 140. The SQSH scored 38 on the TMI, a very good score. It appears that this stream has dramatically improved.
TN06010108 005 - 1000	NOLICHUCKY RIVER	Greene	9.4	Loss of biological integrity due to siltation	Agriculture Source in Other State	This stream was listed in 2002 as a result of biorecons conducted upstream and downstream of this segment in 2000. In 2005-06 TDEC established a SQSH station at mile 27.8 (Bewley Island). The SQSH documented 7 EPT genera and 16 total genera, with a very good habitat score of 152. The SQSH scored 34 on the TMI, a very good score. It appears that this stream is meeting the fish and aquatic life use.
TN06010108 005 - 2000	NOLICHUCKY RIVER	Greene	6.6	Loss of biological integrity due to siltation Escherichia coli	Agriculture Source in Other State	This stream was listed in 2002 as a result of biological and bacteriological surveys conducted in 2000. 2005 TDEC establ;ished a chemical station and SQSH station at mile 39.3 (d/s Pigeon Creek). 11 EPT genera, 21 total genera. Index score = 38. Habitat score = 181. Zero out of 13 E. coli observations over 941. E. coli levels very low. It appears that this stream is meeting the fish and aquatic life and recreatrional use criteria.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN06010108 005 - 1121	RADER BRANCH	Cocke	2.0	Alteration in stream-side or littoral vegetative cover	Pasture Grazing	This stream was listed in 2002 as a result of a survey in 2000. In 2005-06 reviewed this stream. Rader Branch has an extremely small watershed (approximately 0.3 miles). It is frequently dry. Our ecoregion database does not contain any reference streams this small. In hindsight, we should not have compared a stream this small to ecoregion goals based on larger streams. In our view, the appearance of impacts may be more due to periodic dryness than pollution. We intend to change this stream to "not assessed."
TN06010108 009 - 1000	COVE CREEK	Greene	29.7	Loss of biological integrity due to siltation	Pasture Grazing	This stream was listed in 2002 as a result of surveys in 2000. In 2005-06 TDEC established a SQSH station at mile 1.0 (d/s Fillers Mill Road). The SQSH documented 8 EPT genera and 28 total genera, with the excellent habitat score of 153. The SQSH scored 36 on the TMI, a very good score. Additionally, in 2003, TVA performed a biorecon at mile 3.4 (Soloman Lutheran Church). The biorecon scored 15, a perfect score. It appears that the stream has improved.
TN06010108 010 - 0800	HICE BRANCH	Greene	2.1	Siltation Alteration in stream-side or littoral vegetation	Pasture Grazing	This stream was listed in 2002 as a result of surveys in 2000. In 2005-06 TDEC established a SQSH station at mile 0.2 (u/s Johnson Road). The SQSH documented 7 EPT genera and 30 total genera. The SQSH scored 36 on the TMI, a very good score. The habitat score was 124. It appears that the stream has improved.
TN06010108 010 - 1900	MARTINS CREEK	Unicoi	8.3	Alteration in stream-side or littoral vegetative cover	Discharges from MS4 area	This stream was listed in 2002 as a result of a survey in 2001. In 2005, TDEC established a SQSH station at mile 0.1 (d/s Meadowbrook Drive). The survey documented 12 EPT genera and 29 total genera. The resulting TMI score was 34, which passed. The habitat score was good (155). A tributary, Spring Creek, will need to remain listed.
TN06010108 010 – 2000	NOLICHUCKY RIVER	Greene Washington	38.5	Loss of biological integrity due to siltation	Pasture Grazing Source in Other State	This stream was listed in 2002 as a result of surveys in 2000. In 2005-06 TDEC established a SQSH station at mile 0.2 (u/s Johnson Road). The SQSH documented 7 EPT genera and 30 total genera. The SQSH scored 36 on the TMI, a very good score. It appears that the stream has improved.
TN06010108 010 - 3100	KATY BRANCH	Washington	0.8	Loss of biological integrity due to siltation	Agriculture	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 1.0 (u/s Jackson Branch Road). The SQSH documented 7 EPT genera and 31 total genera. The SQSH scored 34 on the TMI. The habitat scored 163, a very good score. It appears that the stream has improved.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN06010108 010 - 3600	MOORE BRANCH	Washington	7.7	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Pasture Grazing	This stream was listed in 2002 as a result of a survey in 2000. In 2006 TDEC established a SQSH station at mile 0.3 (u/s Pig Broyles Road). The SQSH documented 5 EPT genera and 30 total genera. The SQSH scored 34 on the TMI. The habitat score was 73. It appears that the stream has improved due to the closing of a dairy that previously operated on this stream.
TN06010108 029 - 0300	SCIOTO CREEK	Unicoi	14.8	Loss of biological integrity due to siltation	Land Development	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 0.1 (u/s Hwy 107). The SQSH documented 10 EPT genera and 35 total genera. The SQSH scored 36 on the TMI and the habitat score was 155. Both are good scores. It appears that the stream has improved.
TN06010108 029 - 1000	NORTH INDIAN CREEK	Unicoi	8.0	Loss of biological integrity due to siltation	Discharges from MS4 area	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 0.5 (u/s walking trail near I-26). The SQSH documented 15 EPT genera and 35 total genera. The SQSH scored 36 on the TMI and the habitat score was 147. Both are good scores. Additionally, 2005 TVA biorecon at mile 1.2 with documented 15 EPT families, 9 intolerant, and 32 total families. The biorecon scored perfectly,15. It appears that the stream has improved.
TN06010108 030 - 0210	SPLATTER CREEK	Greene	3.6	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetation	Pasture Grazing Livestock in Stream	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 0.5 (u/s Splatter Creek Road). The SQSH documented 9 EPT genera and 39 total genera. The SQSH scored 32 on the TMI, which is a passing score. The habitat score was 111.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN06010108 030 - 0300	KEEBLER BRANCH	Washington	7.4	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Pasture Grazing	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 0.2 (u/s Kyker Road). The SQSH documented 8 EPT genera and 32 total genera. The SQSH scored 38 on the TMI, which is a good score. The habitat score was 137.
TN06010108 030 - 0400	CLEAR FORK	Washington	12	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Pasture Grazing	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 1.4 (u/s Bowmantown Road). The SQSH documented 7 EPT genera and 34 total genera. The SQSH scored 32 on the TMI, which is a passing score. The habitat score was 145. However, at the TDEC chemical station at mile 0.5 (Old State Road), six out of 12 E. coli observations were over 941 cfu, so the stream will need to be listed for pathogens.
TN06010108 035 – 2310	UNION TEMPLE CREEK	Greene	23.9	Loss of biological integrity due to siltation Other Habitat Alterations	Pasture Grazing	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 0.1 (u/s Dottie Chapel Road). The SQSH documented 7 EPT genera and 30 total genera. The SQSH scored 32 on the TMI, which is a passing score. The habitat score was 132.
TN06010108 035 – 2900	FOX BRANCH	Greene	1.5	Other Habitat Alterations	Pasture Grazing	This is a very small stream that was assessed following a biorecon in 2000. Since that time, this stream has been dry when observed, including in 2005-06. It is now believed that the previous appearance of impacts was due to periodic dryness rather than pollution. The habitat score was 65.
TN06010108 042 - 0110	SLOP CREEK	Hamblen	1.7	Alteration in stream-side or littoral vegetative cover H	Pasture Grazing	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 0.1 (u/s Slop Creek Road). The SQSH documented 10 EPT genera and 33 total genera. The SQSH scored 36 on the TMI and 132 on habitat, which are good scores. The stream appears to have improved since last surveyed.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN06010108 088 - 0200	ALEXANDER CREEK	Greene	2.8	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetation	Pasture Grazing	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 0.1 (u/s Hwy 351). The SQSH documented 9 EPT genera and 29 total genera. The SQSH scored 36 on the TMI and 143 on habitat, which are good scores. The stream appears to have improved since last surveyed.
TN06010108 536 - 0100	LOYD CREEK	Washington	4.2	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Pasture Grazing	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH station at mile 0.5 (u/s Treadway Road). The SQSH documented 7 EPT genera and 23 total genera. The SQSH scored 36 on the TMI, which is a good score. The habitat score was 125. The stream appears to have improved since last surveyed.
TN06010108 536 – 1000 & 2000	CHEROKEE CREEK	Washington	20.8	Loss of biological integrity due to siltation	Pasture Grazing Land Development	This stream was listed in 2002 as a result of a survey in 2000. In 2005 TDEC established a SQSH stations at mile 1.0 (u/s Taylors Bridge Road) and at mile 2.5 (u/s Charlie Parker Road). At mile 1.0, the SQSH documented 9 EPT genera and 31 total genera. The SQSH scored 38 on the TMI, which is a good score. At mile 2.5, the SQSH documented 9 EPT genera and 23 total genera. The SQSH scored 36 at this site. The habitat score was 137. The stream appears to have improved since last surveyed.
TN06010205 011 - 0200	JOE MILL CREEK	Grainger	5.6	Loss of biological integrity due to siltation	Mine Tailings	This stream had historical issued due to mine tailings and scored poorly in previous biological surveys. In 2007, TDEC performed a SQSH at mile 0.1 (Dave Jackson Road). The survey documented 10 EPT genera and 35 total genera. The resulting TMI score was 36, a good score. The habitat score was 166. It appears this stream has improved.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN06010206 026 – 1000	DAVIS CREEK	Campbell Claiborne	8.0	Nutrients Siltation	Confined Animal Feeding Operation (point and nonpoint)	The downstream section of this stream appears to have improved since last surveyed. In 2004, TDEC performed SQSH surveys at both mile 11.6 (d/s of Academy Road) and at mile 14.6 (Ford off Old Hwy 63). Scores passed biocriteria at both sites, scoring 32 (7 EPT genera, 29 total genera) and 38 (10 EPT genera, 25 total genera), respectively. Additionally, in 2004 TVA performed a biorecon survey at mile 11.1 (McNew Cemetery). They found 13 EPT families, 9 intolerant, 31 total families, for a perfect biorecon score of 15. It is hoped that operational improvements at upstream dairies have helped conditions in the stream. However, it will need to remain listed for pathogens and upstream segments will also need to remain listed.
TN06020004 012 – 0100	UNNAMED TRIB TO WOODCOCK CREEK	Sequatchie	1.7	Iron pH	Inactive Mining	This stream was listed in 2002 as a result of a survey conducted in 2000. In 2005-06 TDEC established a SQSH, biorecon, and monitoring station at mile 0.5 (Logging road off Daus Mtn Road). (Station # WOODC1T0.5SE.) The SQSH documented 12 EPT genera and 35 total genera, with a very good habitat score of 176. The biorecon score a perfect 15 (14 EPT families, 11 intolerant, 19 total families). pH levels met the criterion. The originally basis for listing the stream for iron was due to habitat issues. The latest habitat score indicate that this is no longer an issue. It appears that this stream has dramatically improved.
TN06020001 421 – 0100	SOUTH SUCK CREEK	Marion	9.2	Loss of biological integrity due to siltation	Abandoned Mining	A biological survey was done on this stream in 2005. While the stream still doesn't meet regional biological goals, there was little silt in this high gradient stream. We do not consider it appropriate to continue listing the stream for silt, however, it will need to remain listed for pH.
TN08010100 001 –1000	MISSISSIPPI RIVER	Shelby	24.9	Nitrate Siltation	Agriculture Sources Outside the State	The entire length of the Mississippi River bordering Tennessee was listed for silt and nutrients fifteen years ago. The basis for this listing was due to concerns about how the Mississippi might be contributing to downstream impairments, including the "Dead Zone" in the Gulf of Mexico. The basis of the listing was never that water quality conditions violated Tennessee's water quality standards – we have considerable uncertainty how we would apply our narrative criteria for silt and nutrients to a waterbody this size. (Cont. on next page)

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN08010100 001 –1000	MISSISSIPPI RIVER	Shelby	24.9	Nitrate Siltation	Agriculture Sources Outside the State	(Continued from previous page.) Much time has passed and we continue to doubt the wisdom and scientific basis for the original listing. It seems to us that listing serves no useful purpose. We noted that in the aftermath of Hurricane Katrina, much attention was drawn to the fact that the coastline in Louisiana is retreating inland. Part of the identified reason is that the Mississippi is no longer delivering silt to the wetland areas along the coast. It may be that to address the Dead Zone, nutrients will need to be reduced. However, this will be accomplished by a concerted national effort to identify acceptable nutrient loads. Tennessee's listing of the Mississippi will not contribute anything to this process. We request that we be allowed to delist the river for these specific pollutants. The following was excerpted from EPA's decision document concerning the state of Mississippi's approved request ot delist the Mississippi River for nutrients: *Based on the review of the available data and information, EPA has determined that there is no specific evidence of impairment by nutrients within the aforementioned segments of the Mississippi River. Taking into account the limited available monitoring data, there are no documented observations of any nuisance algal blooms, elevated levels of primary productivity, or water clarity issues that are attributed to nutrient enrichment within the aforementioned segments of the Mississippi River. There are no observed excursions of the minimum dissolved oxygen criteria with respect to Mississippi River monitoring data collected within the state of Mississippi.* *There are no observed excursions of the pH criteria with respect to Mississippi River monitoring data collected within the state of Mississippi. The rapid stream velocities that are characteristic of the aforementioned segments of the Mississippi River reduce the potential of significant primary productivity and thus nuisance algal blooms.* *The limited light penetration into the water column as a result of the suspended sediment and silt concentrations in the aforementioned segments reduces the potential for primary productivity and thus nuisance algal blooms.*

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN08010100 001 - 2000	MISSISSIPPI RIVER	Shelby Tipton	40.0	Nitrate Siltation	Agriculture Sources from Other States	See explanation for segment 1000.
TN08010100 001 - 3000	MISSISSIPPI RIVER	Tipton Lauderdale	45.2	Nitrate Siltation	Agriculture Sources from Other States	See explanation for segment 1000.
TN08010100 001 - 4000	MISSISSIPPI RIVER	Dyer Lake	74.0	Nitrate Siltation	Agriculture Sources from Other States	See explanation for segment 1000.
TN08010100 001 - 5000	MISSISSIPPI RIVER	Lake	10.2	Nitrate Siltation	Agriculture Sources from Other States	See explanation for segment 1000.
TN08010100 POPLARTLK _1000	POPLAR TREE LAKE	Shelby	125 ac	Nutrients	Agriculture	This lake was originally listed about twenty years ago due to complaints of farm runoff and excessive biomass. In 2005-06, TDEC monitored DO, conductivity, pH, nutrients and temperature in this lake. There was only one temperature (31.7) and pH violation (5.55). DOs were within criteria. This lake is certainly enriched, which is to be expected in that subecoregion; however, the levels of biomass noted in 2006 do not seem to be interfering with existing recreational uses (primarily fishing). Samplers did not see any obvious pollutant sources. It is now believed that these nutrient levels are consistent with natural conditions in West Tennessee lakes.
TN08010202 001 - 0100	UNNAMED TRIB TO OBION RIVER`	Obion Dyer	25.8	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a biorecon at mile 1.6 (u/s Spence Spur Rd). The survey documented 1 EPT family and 18 total families, with a habitat score of 97. The resulting biorecon score was 8. Under the 73a biocriteria, in which the maximum score is 10, this stream scored better than in 2001. It is now believed that the stream is in OK shape for this subecoregion.
TN08010202 001 - 0600	DRY CREEK	Obion	6.8	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a biorecon at mile 0.9 (u/s Black Lane). The survey documented 4 EPT families, 1 intolerant, and 20 total families. The resulting biorecon score was 11. The habitat score was 70. Stream appears better than in the previous survey. Appearance of impacts in 2001 may have been due to periodic dryness rather than pollution. (The name “Dry Creek” was a good hint of that.)

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN08010202 001 - 0900	MURRAY CREEK	Dyer	6.4	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a biorecon at mile 1.1 (u/s Millsfield Road). The survey documented 5 EPT families, 1 intolerant, and 11 total families. The resulting biorecon score was 13. The habitat score was 74. Stream appears better than in the previous survey. The appearance of impacts in 2001 may have been due to periodic dryness rather than pollution.
TN08010202 003 - 0200	PARKER BRANCH	Gibson	10.0	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2005, TDEC performed a biorecon at mile 0.8 (Happy Hollow Road). The survey documented 3 EPT families, 1 intolerant, and 15 total families. The resulting biorecon score was 11. The habitat score was 93. Stream appears better than in the previous survey. The appearance of impacts in 2001 may have been due to periodic dryness rather than pollution.
TN08010202 009 - 2300	STEPHENS CREEK	Weakley	9.2	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Nonirrigated Crop Production	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2005, TDEC performed a biorecon at mile 1.3 (u/s Hwy 190). The survey documented 7 EPT families, 3 intolerant, and 16 total families. The resulting biorecon score was 15, which is a perfect score. The habitat score was 76. Stream appears better than in the previous survey. The appearance of impacts in 2001 may have been due to periodic dryness rather than pollution.
TN08010202 009 - 2400	CAMP GROUND CREEK	Weakley	20.5	Alteration in stream-side or littoral vegetative cover	Nonirrigated Crop Production	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2005, TDEC performed a biorecon at mile 1.2 (u/s Billingsby Camp Road). The survey documented 6 EPT families, 2 intolerant, and 14 total families. The resulting biorecon score was 13. The habitat score was 83. Stream appears better than in the previous survey. The appearance of impacts in 2001 may have been due to periodic dryness rather than pollution.
TN08010202 026 - 1000	DAVIDSON CREEK	Obion	14.6	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production Pasture Grazing Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2005, TDEC performed a biorecon at mile 2.6 (Troy-Polk Station Road). The survey documented 5 EPT families, 1 intolerant, and 18 total families. The resulting biorecon score was 13. The habitat score was 69. The stream appears better than in the previous survey. The appearance of impacts in 2001 may have been due to periodic dryness rather than pollution.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN08010202 040-1000	BLUE BASIN, REELFOOT LAKE	Obion Lake	10950.0 ac	pH	Internal Nutrient Cycling	On occasion, the Blue Basin has elevated pH levels due to the high levels of biomass. We do not believe that these periodic violations are frequent enough to justify listing. Additionally, the pH levels are a byproduct of the main problem, euthrophication. The basin will remain listed for nutrients and all other identified pollutants.
TN08010202 041 - 1000	BAYOU DU CHIEN	Obion	5.3	Nutrients Loss of biological integrity due to siltation Low dissolved oxygen	Nonirrigated Crop Production	Bayou du Chien is a wetland stream within the Reelfoot National Wildlife Refuge. The Division has a long monitoring history here due to the stream's importance as a tributary to Reelfoot Lake, one of our Outstanding National Resource Waters. When we began the ecoregion project in the mid 90s, Bayou due Chien was found to be one of our best delta (73a) streams and an ecoregion reference station was established there. There is some agriculture in the watershed – the federal government grows selected crops to help attract waterfowl to the refuge – however, most of the watershed is in fully protected status. In 2005 and 2006, TDEC performed biorecons at the ecoregion station. The 2006 survey documented 1 EPT family and 16 total families which provided a biorecon score of 8, with a habitat score of 147. The 2005 survey found 2 EPT families and 20 total families, with a habitat score of 151. This yielded the perfect (in 73a) biorecon score of 10. In the judgment of the Division, conditions in this stream within a protected federal wildlife refuge represent natural (best attainable) conditions in this subecoregion. We would like to remove the listings for our reference stream.
TN08010202 948 - 1000	MILL CREEK	Obion	17.2	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2005, TDEC performed biorecons at mile 4.5 (d/s Wolverine Rd) and at mile 7.5 (u/s Hwy 221). At mile 4.5, 5 EPT families, 2 intolerant, and 21 total families were documented, which resulted in the perfect biorecon score of 15. The biorecon score at mile 7.5 was also 15, documenting 8 EPT families, 2 intolerant, and 24 total families. The habitat scored 83 at mile 4.5 and 121 at mile 7.5. The appearance of impacts in 2001 may have been due to periodic dryness rather than pollution.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN08010203 001 - 0900	CLEAR CREEK	Carroll	3.6	Loss of biological integrity due to siltation L Low dissolved oxygen Physical Substrate Habitat Alterations	Channelization Upstream Impoundment Undetermined Source	This stream was listed in 2002 due to a poor biorecon score from 2001. Additionally, dissolved oxygen monitoring below the Carroll Lake dam indicated issues. TDEC performed a biorecon at mile 1.1 (u/s Big Buck Road). 2 EPT families, 2 intolerant, and 19 total families were documented, which resulted in a biorecon score of 11. The habitat score was 111. Additionally, chemical stations were established at mile 3.5 (u/s Hwy 22, below Carroll Lake) and at mile 1.1 (u/s Big Buck Road). DO criteria were met at both locations. We will continue to watch this stream as the improved conditions in 2005 may not continue in a drier year due to the influence of the upstream impoundment. But for now, the steam appears better. It will need to remain listed for pathogens.
TN08010203 001 – 1200	DeMOSS CREEK	Carroll	24.2	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Nonirrigated Crop Production	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2005, TDEC performed a biorecon at mile 1.0 (u/s Highway 105). 4 EPT families, 1 intolerant, and 18 total families were documented, which resulted in a biorecon score of 11. The habitat score was 93 It is believed that this stream has improved.
TN08010203 001 - 1300	THOMPSON CREEK	Carroll Gibson	20.2	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Nonirrigated Crop Production	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a biorecon at mile 3.0 (u/s Highway 105). 3 EPT families, 2 intolerant, and 13 total families were documented, which resulted in a biorecon score of 11. The habitat score was 106. It is believed that this stream has improved.
TN08010203 001 - 1400	DOLAN CREEK	Gibson	7.7	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a biorecon at mile 1.9 (u/s Highway 105). 5 EPT families, 3 intolerant, and 17 total families were documented, which resulted in the perfect biorecon score of 15. The habitat score was 79. It is believed that this stream has improved.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN08010203 001 - 1800	LICK CREEK	Gibson	6.6	Loss of biological integrity due to siltation Alteration in stream-side or littoral vegetative cover	Nonirrigated Crop Production	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC established a chemical station and performed a biorecon at mile 1.4 (Sample Road). 4 EPT families, 2 intolerant, and 16 total families were documented, which resulted in the perfect biorecon score of 15. The habitat score was 90. It is believed that this stream has improved. The chemical data did not exceed any criteria except for one low dissolved oxygen measurement taken when flows were very low.
TN08010203 001 - 1810	UNNAMED TRIB TO LICK CREEK	Gibson	4.4	Loss of biological integrity due to siltation	Nonirrigated Crop Production	This stream was listed in 2002 due to a poor biorecon score from 2001. Each time the stream has been observed since then, it has been dry and could not be sampled in 2006 for that reason. The habitat score was 94. We now believe that the appearance of impacts in 2001 were due to periodic dryness.
TN08010203 010 - 2000	BEAVER CREEK	Carroll	3.4	Nutrients Loss of biological integrity due to siltation Low dissolved oxygen	Minor Municipal Point Source Nonirrigated Crop Production Urban Runoff/Storm Sewers	This section of stream was listed in 2002 due to a poor biorecon score from 2001, plus chemical monitoring that indicated dissolved oxygen issues. In 2006, TDEC performed a biorecon at mile 6.4 (d/s Highway 22). 8 EPT families, 2 intolerant, and 26 total families were documented, which resulted in the perfect biorecon score of 15. The habitat score was 110. It is believed that this stream is better due to improvements at the municipal discharge and diurnal monitoring indicates dissolved oxygen levels have improved.
TN08010203 010 - 3000	BEAVER CREEK	Carroll	8.8	Loss of biological integrity due to siltation	Nonirrigated Crop Production	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a biorecon at mile 7.5 (u/s Highway 70 Bypass). 7 EPT families, 2 intolerant, and 25 total families were documented, which resulted in the perfect biorecon score of 15. The habitat score was 97. It is believed that this stream has improved.
TN08010203 011 - 1000	CROOKED CREEK	Carroll	4.7	Physical Substrate Habitat Alterations	Nonirrigated Crop Production Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a biorecon at mile 2.3 (u/s Highway 22). 4 EPT families, 3 intolerant, and 21 total families were documented, which resulted in the biorecon score of 13. The habitat score was 155. It is believed that this stream has improved.

APPENDIX A (cont.)

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Reason For Delisting
TN08010203 020 - 2000	MUD CREEK	Weakley	11.6	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2006, TDEC performed a biorecon at mile 16.2 (u/s Highway 22). 5 EPT families, 1 intolerant, and 15 total families were documented, which resulted in the biorecon score of 13. The habitat score was 93. It is believed that this stream has improved and that the previous low biorecon score may have been due to periodic low flows.
TN08010203 032 – 3000	RUTHERFORD FORK OBION RIVER	Carroll Gibson	24.4	Loss of biological integrity due to siltation Physical Substrate Habitat Alterations	Nonirrigated Crop Production Channelization	This stream was listed in 2002 due to a poor biorecon score from 2001. In 2005, TDEC performed biorecons at four locations in the segment: mile 29.9 (u/s Hwy 79), mile 30.5 (u/s Hwy 77), mile 34.0 (u/s Hwy 220), and at mile 51.1 (d/s Hart Cemetery Road). The resulting biorecon scores were 15 (10 EPT families, 3 intolerant, and 22 total families), 13 (7 EPT families, 1 intolerant, 22 total families), 15 (11 EPT families, 4 intolerant, 27 total families), and 13 (5 EPT families, 1 intolerant, 19 total families), respectively, all indicated that this section of the stream has improved. The habitat scores were 114 for mile 29.9, 87 for mile 30.5, and 136 for mile 34.0. There was no habitat data for mile 51.1. The more downstream segments of the stream will need to remain listed.
TN08010204 021 - 0200	COW CREEK	Gibson	11.8	Oil and Grease	Undetermined Source	Oil and grease was observed in this creek on one occasion several years ago, but has not been noticed since. We are comfortable saying that this was a temporary event that has not been repeated. The stream will need to remain listed for siltation and habitat alteration.
TN08010208 002 - 0910	EAST FORK HURRICANE CREEK	Tipton	11.1	Habitat loss due to stream flow alteration	Upstream Impoundment	This stream was previously considered Category 4c (impact not caused by a pollutant). In 2005, field staff collected a SQSH sample at mile 0.1 (u/s of Girl Scout Road). The resulting Tennessee Macroinvertebrate Score of 34 passed the regional interpretation of our narrative biocriterion. The habitat score was 104. Because of the large impoundment upstream, the Division will need to continue to monitor this stream as impacts may be more obvious in low flow years.

APPENDIX B: Streams on the 2006 303(d) List Proposed for Delisting in 2008 For a Basis Other Than Water Quality Improvement

Waterbody ID	2006 Impacted Waterbody	County	Miles Impacted	2006 CAUSE (Pollutant)	2006 Pollutant Source	Basis For Delisting
TN06020003 014 - 0200	DAVIS MILL CREEK	Polk	3.8	Copper Iron Zinc pH Loss of biological integrity due to siltation	Mill Tailings Abandoned Mining	The Davis Mill Creek Watershed is the subject of an EPA Region IV CERCLA Project. The CERCLA Project incorporates an extensive public participation phase which helps govern and direct the remediation process. The strategy developed through this public process addresses all waters meeting water quality criteria within the watershed by rerouting them through the Belltown Diversion to the Ocoee River. Additionally, the stormwater and limited groundwater generated within the remainder of the watershed will be captured and pumped to the Cantrell Flats Waste Water Treatment Plant for treatment and discharge to the Ocoee River. Since the hydrology of the historic Davis Mill Creek will be significantly altered through the CERLA Project and appropriately mitigated at that point, Davis Mill Creek will no longer be considered classified waters of the state. Rather Davis Mill will be identified as a treatment system for a CERCLA site. EPA has also indicated that this stream can be removed from the list (see letter dated July 24, 2007).

APPENDIX C: Federally Listed Endangered Aquatic Species in the State of Tennessee

Scientific Name	Common Name	Status	Total Obs.	Pre-1975 obs.	Post-1975 obs.	HUC location of endangered species post-1975	Extirpated since 11/1975	When Listed	Federal Register Citation

Lampsilis virescens	Alabama lampmussel	E	6	5 obs 1915-1974	1 obs 1995	06030002	Yes*	15	41 FR 24064; June 14, 1976
Medionidus parvulus	Coosa moccasinshell	E	8	1 obs 1973	7 obs 1997-1999	03150101	No	495	58 FR 14339; March 17, 1993
Obovaria retusa	Ring pink mussel	E	14	7 obs 1924-1964	7 obs 1978-1999	05130201 06040001	No	369	54 FR 40112; Sept. 29, 1989
Pegias fabula	Little-wing pearlymussel	E	11	5 obs 1914-1966	6 obs 1981-2000	05130104 05130107 05130108	No	342	53 FR 45865; Nov. 14, 1988
Plethobasus cicatricosus	White wartyback pearlymussel	E	11	4 obs 1956-1964	7 obs 1978-1987	05130201 06040001	No	15	41 FR 24064; June 14, 1976
Plethobasus cooperianus	Orange-foot pimpleback pearlymussel	E	41	19 obs 1895-1970	22 obs 1978-1999	05130201 06010201 06010206 06020001 06040001	No	15	41 FR 24064; June 14, 1976
Pleurobema clava	Clubshell	E	3	0	3 obs 1978-1992	5130108 06040001	No	488	58 FR 5642; Jan. 22, 1993
Pleurobema georgianum	Southern pigtoe	E	11	1 obs pre-1975	10 obs 1995-1997	03150101	No	495	58 FR 14339; March 17, 1993
Pleurobema gibberum	Cumberland pigtoe	E	13	0	13 obs 1976-1998	05130107 05130108 06030003	No	423	56 FR 21087; May 7, 1991
Pleurobema plenum	Rough pigtoe	E	17	3 obs 1920-1964	14 obs 1979-1998	05130201 06010205 06020001 06040001	No	15	41 FR 24064; June 14, 1976

APPENDIX C: Federally Listed Endangered Aquatic Species in the State of Tennessee

Scientific Name	Common Name	Status	Total Obs.	Pre-1975 obs.	Post-1975 obs.	HUC location of endangered species post-1975	Extirpated since 11/1975	When Listed	Federal Register Citation
Ptychobranchus greeni	Triangular kidneyshell	E	2	0	2 obs 1980-1995	03150101	Yes*	495	58 FR 14339; March 17, 1993
Quadrula cylindrica strigillata	Rough rabbitfoot	E	24	1 obs 1960	23 obs 1975-1999	06010205 06010206	No	602	62 FR 1657; Jan. 10, 1997
Quadrula intermedia	Cumberland monkeyface pearlymussel	E	45	15 obs 1900-1973	30 obs 1975-2001	06010206 06030003 06040002	No	15	41 FR 24064; June 14, 1976
Quadrula sparsa	Applachian monkeyface pearlymussel	E	11	2 obs 1958-1964	9 obs 1976-1998	05130201 06010206	No	15	41 FR 24064; June 14, 1976
Toxolasma cylindrellus	Pale lilliput pearlymussel	E	13	10 obs 1886-1970	3 obs 1982-1995	06030002 06040002 06040003	Yes*	15	41 FR 24064; June 14, 1976
Villosa perpurpurea	Purple bean	E	10	3 obs 1913-1970	7 obs 1985-2000	06010104 06010208	No	602	62 FR 1657; Jan. 10, 1997
Villosa trabalis	Cumberland bean pearlymussel	E	17	4 obs 1913-1939	13 obs 1980-2000	05130104 05130108 06010104 06010208 06020002	No	15	41 FR 24064; June 14, 1976
Snails									
Athearnia anthonyi	Anthonys River Snail	E	14	6 obs 1941-1965	8 obs 1975-1994	06010201 06010205 06020004 06030001	No	538	59 FR 17998; April 15, 1994
Pyrgulopsis (Marstonia) ogmorhaphe	Royal marstonia (Obese snail)	E	4	0	4 obs 1997	03150101	No	538	59 FR 17998; April 15, 1994

*Note: None of the extirpated species have been found on segments listed as partially or non-supporting on the 2002 303(d) List. See the 2002 303 (d) List for endangered species located on partially or not-supporting waterbody segments.

Status:
E = Endangered
T = Threatened
